1. Monetary development

Over the course of July, consumer prices fell month-on-month by 0.4%, bringing down the 12-month rate of inflation from 7.4% to 7.0%. Monetary development was characterised by a continued fall in the price of money, supported by an adequate level of liquidity in the banking sector, which was partly sterilised by the NBS. Due to the favourable development of bank liquidity, the average interest rate on 1-month interbank deposits fell from 13.5% in June to 11.7% in July. In general, we may say that the differences between short, medium, and long-term interbank deposit rates diminished to some extent in July. The exchange rate of the Slovak crown (Sk) was stable during the month, at a level exceeding 2% inside the devaluation section of the fluctuation band. By the end of July, the value of the crown had appreciated by 0.36% compared with the beginning of the month.

Slowdown in price inflation, accompanied by continued fall in the price of money and appreciation in the value of the Slovak crown

The money supply, monetary aggregates, and net domestic assets developed in accordance with the monetary programme of the NBS for 1998, which has been designed to support the goals of monetary policy in the area of interest-rate stabilisation.

1.1. Factors affecting the development of the money supply

In July, the money supply in terms of M2 achieved a month-on-month increase of Sk 9.9 billion (the highest figure in 1998), representing a year-on-year growth of 9.0%. The growth in M2 was due exclusively to net domestic assets, which increased month-on-month by Sk 9.2 billion, while the rate of year-on-year growth reached 10.1%.

The money supply increased month-on-month due to growth in net domestic assets, ...

With regard to net domestic assets, the most rapid increase was recorded in net credit to the Government (Sk 10.5 billion month-on-month). The rate of year-on-year growth in net credit to the Government reached 34% in July.

... generated by net credit to the Government, ...

At the end of July, the performance of the State budget resulted in a deficit of Sk 8.9 billion, representing a marked deterioration (Sk 5 billion) compared with the previous month. Budget revenue reached Sk 103.6 billion and expenditure totalled Sk 112.5 billion.

... influenced by a deterioration in State budget performance

Unemployment and inflation (%)

At the end of the month, the net position of the Government vis-a-vis the banking sector reached (according to preliminary data) Sk 63.3 billion, representing a month-on-month increase of approximately Sk 10.8 billion. The level of internal debt rose, due primarily to growth in the size of the budget deficit. The balance sheet of the NBS for 1991 was settled during the month. At the same time,

Internal debt of the Government

decreases were recorded in other items as well, such as the balances of state funds, insurance funds, and other state deposits.

Stable development in bank lending

The acceptable development of the money supply during July, accompanied by dynamic growth in net credit to the Government, was due to the moderate course of bank lending, which increased month-on-month by Sk 0.9 billion. In comparison with the same period of last year, this represented a 4.4% rate of growth against 3.4% in June. Despite this growth (Sk 12.8 billion since the beginning of 1998, compared with Sk 1.5 billion during the first seven months of 1997), bank lending represents a stabilising element within net domestic assets.

Development of net foreign assets in the banking sector

According to preliminary data, the volume of net foreign assets in the banking sector (at fixed exchange rates) increased month-on-month by Sk 0.6 billion, due to faster growth in foreign assets (by Sk 7.1 billion) than in foreign liabilities (by Sk 6.5 billion). The increase in net foreign assets of commercial banks (Sk 2.3 billion) was partly offset by a fall in the net foreign assets of the NBS (Sk 1.7 billion).

In July, the foreign exchange reserves of the NBS (at fixed exchange rates) fell month-on-month by Sk 2.4 billion. The decline was due primarily to the payment of principal and interest on government debt (Sk 1.6 billion) and the negative balance of foreign exchange fixing (Sk 0.7 billion). Foreign liabilities of the Government and the NBS declined by Sk 0.7 billion.

Foreign assets of commercial banks increased month-on-month by Sk 9.5 billion, due mainly to growth in deposits and loans granted to foreign banks (Sk 7.6 billion). Foreign liabilities of commercial banks increased month-on-month by Sk 7.2 billion, due to short-term borrowings from foreign banks (Sk 9.2 billion) and decline in other foreign liabilities.

Development of NBS foreign exchange reserves

(US\$ millions)

Value of gold = 42.22 US\$/oz

Foreign exchange reserves of the NBS

At the end of July, the total foreign exchange reserves of the NBS (at current exchange rates) reached US\$ 3,770 million, representing a month-on-month fall of US\$ 20.1 million. The volume of foreign exchange reserves was 3.1 times greater than the average volume of monthly imports of goods and services to Slovakia during the first six months of 1998.

1.2. Structure of the money supply

Month-on-month increase in M2, ...

In July, the M2 money supply (at fixed exchange rates) increased by Sk 9.9 billion, reaching Sk 460.9 billion at the end of the month. The growth in M2 was due to an increase in both quasi-money (Sk 4.2 billion) and the M1 aggregate (Sk 5.7 billion).

Development of the M2 monetary aggregate

(Sk billions)

Compared with the previous month, the rate of year-on-year growth in the money supply accelerated, reaching 9.0% at the end of July. The year-on-year increase in quasi-money (13.8%) continued to exceed the rate of growth in the M1 aggregate (0.9%), which showed negative growth dynamics in June.

... accompanied by acceleration in the rate of year-on-year growth, ...

The volume of currency outside the banking sector increased by Sk 0.4 billion over the course of July. The monthly cycle of currency issue followed a standard course.

In July, demand deposits recorded an increase of Sk 5.3 billion and represented the most dynamic component of the money supply. The development of demand deposits was characterised by a marked increase during the first ten-day period, and a gradual decline during the subsequent twenty days.

... was reflected in both demand deposits, ...

Time deposits recorded a month-on-month increase of Sk 3.3 billion, which renewed their upward trend after the June decline. In July, foreign-currency deposits increased month-on-month by Sk 0.9 billion, following a long-term trend of growth.

... as well as time deposits and foreign-currency deposits

Regarding the individual components of the money supply, the weight of the M1 aggregate increased somewhat during July, due mainly to an increase in the share of demand deposits. On the other hand, the weight of time deposits and foreign-currency deposits decreased.

Structure of the money supply (M2)

(%)

	1.1.1998	30.6.1998	31.7.1998	31.7.1997
Money supply [M2]	100.00	100.00	100.00	100.00
Money [M1]	36.63	34.24	34.74	37.52
Currency outside banks [M0]	10.74	11.35	11.20	10.76
Demand deposits	25.89	22.88	23.54	26.76
Quasi-money [QM]	63.37	65.76	65.26	62.48
Time deposits	53.01	54.01	53.57	51.56
Foreign currency deposits	10.36	11.75	11.69	10.92

Slovak-crown deposits, as a component of the money supply, grew in July by Sk 8.6 billion month-on-month, while corporate deposits (including those held by insurance companies) increased by Sk 7.5 billion and household deposits by Sk 1.1 billion. Despite a marked month-on-month increase, the volume of crown deposits (Sk 2.4 billion) remained below the level recorded at the beginning of 1998. Since the beginning of the year, crown deposits have grown by Sk 12.8

Growth in crown deposits, particularly in the corporate sector

billion, whilst corporate deposits have declined by Sk 15.2 billion. The rate of year-on-year growth in crown deposits reached 7.3% in July. Household deposits increased year-on-year by 18.0%, while corporate deposits declined by 10.1%.

1.3. Bank lending

Decline in crown lending, accompanied by an increase in foreign-currency loans

In July, total bank lending (loans to enterprises, households, central and local authorities for extra-budgetary purposes, NBS loans, and other loans) increased month-on-month by Sk 1.2 billion, due to growth in foreign-currency loans (Sk 2.2 billion) and decline in crown loans (Sk 1.0 billion). At the end of July, the volume of bank loans totalled Sk 385.6 billion, of which loans in Slovak crowns accounted for Sk 334.0 billion and foreign-currency loans Sk 51.6 billion. The decline in crown loans was realised in the entrepreneurial sector (Sk 1.2 billion).

Since the beginning of the year, the volume of total bank credit has fallen by Sk 0.1 billion, due to decline in crown loans (Sk 5.1 billion) and growth in foreign-currency loans (Sk 5.0 billion). In the same period of last year, crown loans fell month-on-month by Sk 3.7 billion and loans in foreign-currency grew by Sk 1.2 billion. The volume of total bank credit increased year-on-year by 1.3%; crown loans fell by 1.2%, while loans in foreign currency grew by 21.4%.

1.4. Interest rate development in June

The average interest rate on the total volume of loans fell

In June, the average interest rate on the total volume of loans fell month-on-month by 0.15 points, to 16.35%. The level of interest rates on short-term loans fell by 0.47 points, to 20.0%; lending rates for medium and long-term loans remained virtually unchanged.

The level of interest rates on new loans fell

The average interest rate on new loans fell by 2.15 points (to 16.44%); the rate on short-term loans by 2.33 points (to 16.64%), and that on long-term loans by 1.62 points (to 14.47%). The average lending rate for medium-term loans rose by 1.57 points, to 15.21%. However, the share of new medium (6.79%) and long-term loans (5.05%) in total crown loans was negligible. The level of interest rates was significantly influenced by a change in the structure of loans by purpose with widely differentiated interest rates. Of the total volume of new loans, 65.9% were granted at fixed interest rates and 34.1% at flexible rates.

With regard to individual types of loans by purpose, average interest rates fell on overdrafts (by 3.35 points, to 20.18%), bills-of-exchange credits (by 1.65 points, to 19.57%), and on operating loans (by 1.21 points, to 16.75%). These loans accounted for 85.9% of total bank credit. A month-on-month increase was recorded in the level of interest rates on consumer loans (by 1.13 points, to 14.93%).

The average interest rate on total deposits decreased

Compared with the level in May, the average interest rate on total crown deposits fell by 0.23 points, to 9.92% in June. Decreases were recorded in average interest rates on short-term deposits, mainly on 7-day deposits (by 1.19 points, to 15.01%), 1-month deposits (by 0.89 points, to 16.36%), 3-month deposits (by 0.32 points, to 18.45%), and 18-month deposits (by 0.52 points, to 12.82%). Short-term deposits accounted for 25.7% of total crown deposits.

Interest rates on crown deposits increased in June as a result of a rise in the level of one-year deposit rates (by 0.22 points). The said increase was realised by almost all commercial banks (by 0.06 to 4.07 points).

The level of real interest rates rose

As a result of a fall in the average interest rate on the total volume of deposits (0.23 points) and reduction in the average rate for crown deposits (0.15 points), the nominal margin increased from 6.35% in May to 6.43% in June. The level of real interest rates on one-year deposits rose from 3.22% in May to 3.64% in June, due to a fall in the 12-month rate of consumer-price inflation (from 7.6% to 7.4%), while the average rate of interest on one-year deposits increased by 0.22 points, to 11.04%.

2. Implementation of monetary policy

In July, monetary policy was again implemented in an environment characterised by an adequate volume of liquid assets in the banking sector.

In July, the level of liquidity in the banking sector was positively influenced by the development of autonomous factors, which grew in average terms by Sk 7.4 billion; this increase was not fully offset by the fall in monetary-policy factors. Of autonomous factors, the most significant influence on bank liquidity was exerted by net credit to the Government.

Surplus liquidity generated by the development of autonomous factors ...

The excess liquidity in the banking sector was originated mainly from the State budget in the form of repayments of government securities from previous year, concentrated mostly during the second half of the month, and maturing REPO tenders concluded a month earlier. The NBS increased its sterilisation activity through operations on the open market.

... of which the position of the Government at the NBS worsened

In foreign exchange fixing, 9 transactions were concluded in the total amount of US\$ 30.4 million (US\$ 10 million and DM 37.1 million), representing sales of foreign exchange by the NBS. The currency basket unit followed the course of development on the interbank foreign exchange market, falling in value from 1.0282 (30 June) to 1.0245 (31 July).

Foreign exchange fixing at the NBS

In July, the average volume of monetary-policy factors reached Sk -10.2 billion, which represented a month-on-month fall of Sk 5.6 billion, realised by increased sterilisation through 7-day and, during the second half of the month, 14-day reverse REPO tenders in Central Bank (NBS) bills.

The sterilisation of free liquidity was reflected in the volume of monetary-policy factors

The average volume of NBS bills amounted to Sk 21.6 billion, compared with Sk 17 billion recorded a month earlier, and the volume of NBS bills held by the NBS fell from Sk 10.7 billion in June to Sk 9.8 billion in July. The volume of sterilisation through NBS bills reached Sk 11.8 billion, representing a month-on-month increase of Sk 5.5 billion in average terms.

Despite the sterilisation measures of the NBS and the moderately reducing effect of currency on the level of liquidity in the banking sector, the reserves of commercial banks increased by Sk 1 billion month-on-month and the banking sector generated excess reserves in the amount of Sk 0.5 billion.

Fulfilment of reserve requirements

(Sk billions)

In July, the level of required reserves in the banking sector was set at Sk 38,828 million. By the end of the month, the reserve requirements had been fulfilled to 101.39%. At the end of the first period in July, the reserve requirements had been fulfilled to 101.87%; at the end of the second period, to 100.93%.

3. Inflation

Consumer prices fell month-on-month by 0.4%

In July, consumer prices recorded a month-on-month fall (0.4%) for the first time since the beginning of economic reform. Due to the favourable price development in June, the 12-month rate of inflation fell from 7.4% in June to 7.0% in July. Since the beginning of the year, the level of consumer prices has risen by 3.6% (compared with 4.0% in June).

The deflation in July was caused by seasonal factors, i.e. fall in the price of vegetables, potatoes, and fruit

The month-on-month fall in the level of consumer prices in July was due mainly to price development in the category of foodstuffs and non-alcoholic beverages, which fell by 1.7%. Food prices fell by 1.9%, while the price of non-alcoholic beverages increased by 0.7%. The reduction in food prices was due mostly to a fall in the price of vegetables including potatoes (22.6%) and fruit (5.9%). The price of oils and fats fell by 0.4%, that of milk and cheese by 0.2%; while the price of bread and grain rose by 1.1% and that of meat by 0.4%.

In the category of non-food products, the course of inflation was positively influenced by a reduction in the price of vehicles, i.e. 1.2% (motor vehicles by 1.3%), and motor oil (2.2%). The most significant increases were recorded the price of recreation and culture (0.7%) and health service (0.6%), due mainly to a rise in the price of pharmaceuticals. In other categories of final household consumption, month-on-month price increases ranged from 0.2% to 0.3%, except for education where prices remained unchanged.

Inflation (%)

4. Money market

4.1. Primary market for Treasury bills

In July, the Ministry of Finance of the SR put no Treasury bills up for auction in accordance with the issuing schedule for the 3rd quarter of 1998. The deficit of the State budget was financed from funds obtained from the issue and sale of government bonds on foreign markets. During the period under review, four Treasury bills (issued in 1997) were redeemed in the total amount of Sk 16.265 billion.

4.2. Secondary market

The sterilisation measures of the NBS ...

In July, the National Bank of Slovakia intervened in the money market by conducting 25 REPO tenders solely for sterilisation purposes. The average daily volume of sterilisation amounted to Sk 11.20 billion (the maximum daily volume of sterilisation was Sk 18.88 billion).

During the first half of the month, the NBS sterilised the excess of liquidity on the market by conducting 7-day REPO tenders. The accepted interest rates ranged around 9%, while the maximum rate did not exceed 10%. The long-term surplus of liquidity had a downward effect on the level of interest rates. On the last day of the first period of minimum required reserves, the NBS intervened by conducting a 14-day REPO tender, the third in 1998.

... were realised in the form of REPO tenders ...

The need for sterilisation over a longer period led to a combination of tenders: 14-day tenders were combined with 7-day tenders, which were used for modifying the volume. The surplus of liquidity was also reflected in the demand for issues of government bonds, made on a daily basis.

... with various periods of maturity

Interest rates on the money market showed a tendency to fall during the whole of July. During the first half of the month, the sharpest fall was recorded in overnight deposit rates (on the last day of the period, they were not listed due to the sufficient level of liquidity and the over-fulfilment of required reserves) and in 1-month deposit rates (from 12.96% to 12.0%, i.e. the level of June 1996). During the second period, the fall in interest levels continued: 3-month rates fell to 13.82% (the level of July 1996) and 6-month rates to 15.94% (the level of November 1996), i.e. both by 130 base points compared with the figures recorded at the beginning of the month.

Downward trend in BRIBOR rates

Development of average interbank offered rates (BRIBOR) (% , p.a.)

5. Capital market

5.1. Primary market

In July, five auctions were held in government bonds in accordance with the schedule for the issue of government securities. In the case of three issues, the time of maturity was set at one year; the remaining two had a maturity of two years. The par value was set at Sk 1,000,000 for all the five issues of bonds. The issuer (Ministry of Finance) gradually reduced the coupon yield from 17% p.a. to 16% p.a., then to 15% p.a. The auctions were carried out by means of American-style auction with unlimited issue-amounts.

Government bonds

A common feature of the July issues was a gradual fall in the level of maximum accepted yields to maturity, which fell below 19.00% p.a. (the lowest level since the beginning of 1998) at the last auction in July. Development in July was also marked by a gradual growth in demand for government bonds. Total demand for government bonds reached Sk 31,300 million (representing an increase of 23.96% compared with June); the issuer accepted bids for 39.71% of this amount.

In July, the Ministry of Finance continued to lower the level of maximum accepted yields at government bond auctions. Apart from the relatively low amounts accepted of the total demand, mainly at the first two auctions, the Ministry of Finance started to reduce the level of coupon yields as well. This method was relatively successful since the issuer managed to reduce the maximum accepted yield by 1% p.a. by the end of July, compared with the last auction in the previous month. By maintaining the downward trend in the level of maximum accepted yields to maturity at government bond auctions during July, the Ministry of Finance created a better position for the subsequent financing of its needs through government bond auctions.

Of government bonds issued in paper form (SDL 01) for private individuals (on 20 May) in the amount of Sk 2,000 million, bonds had been sold in the amount of Sk 1,016 million (50.81% of the total) by the end of primary sale (20 July). Most interest was attracted by bonds having a par value of Sk 5,000 and Sk 100,000.

Non-government bonds

During the period under review, five issues of publicly negotiable non-government bonds were made in the total amount of Sk 145 million, representing a decline of 79.26% compared with the figure for July 1997, when publicly negotiable non-government bonds were issued in the amount of Sk 699 million. Since the beginning of 1998, the volume of publicly negotiable non-government bonds has reached Sk 395 million, representing a fall of 93.84% compared with the same period of 1997, when bonds were issued in the total amount of Sk 6,414 million. Although the volume of bonds issued in 1998 is on the increase, it is not likely to reach the level of last year due to competition (in price, quality, and quantity) with government bonds.

5.2. Secondary market

Bratislava Stock Exchange

In July, the volume of trading on Bratislava Stock Exchange (BCPB) totalled Sk 17,459 million. A significant increase (203.59%) was recorded in price-setting transactions, which reached Sk 2,391 million. Two quarters of this amount consisted of listed bonds, so it is not yet possible to talk about a revival of trading on the stock market. With effect from July, BCPB raised the transaction fees for direct contracts over Sk 1 million. The effect of this measure on the development of anonymous trading will be apparent at some time in the future.

In July, most trading took place in listed bonds (71%), followed by bonds on the registered securities market (13%), shares on the free market (8%), shares on the market for registered securities (6%), and listed shares (2%). Since the beginning of the year, securities have been traded on the BCPB floor in the amount of Sk 135 billion, of which price-setting anonymous transactions accounted for 3%.

Bonds

In July, the volume of bond transactions totalled Sk 14,694 million, while anonymous contracts reached Sk 1,952 million, representing a month-on-month increase of 171.72%.

As in the case of shares, direct transactions continued to exceed anonymous contracts in terms of volume. On the BCPB floor, most trading took place in listed bank bonds (namely CSOB 1999 bonds: Sk 1,546 million) in contrast with the previous months, when trading was dominated by government bonds. In direct transactions, the volume of contracts reached Sk 12,742 million and was dominated by government bonds No. 031 and CSOB 1999 bonds.

SDX index

In July, the component of the Slovak Bond Index (SDX) for government bonds recorded no marked fluctuations and closed the month at 114.12 points. The portfolio offered an average yield of 19.5% to maturity. After successful auctions, new issues of government bonds (No. 064 to 067) were incorporated into the base of SDX. The component of SDX for bank and corporate bonds followed an interesting course of development: it closed the month at 112.48 points (after a month-on-month fall of 1.2%); the average yield to maturity stood at 17.7%. On 27 July, this component recorded a sharp fall in value (2.23 points) and a rapid

increase in yields as a result of a fall in the average price of CSOB bonds to 95.05% (the previous average rate was 106.0%).

The total volume of transactions in shares reached Sk 2,765 million, representing an increase of 60.33% compared with the previous month's figure. Direct contracts amounted to Sk 1,656 million, i.e. 95.98% of the total volume of trading. Price-setting anonymous transactions accounted for only 4.02% of the total volume of trading.

Slovak Share Index - SAX

(%)

After seven months, the Slovak Share Index (SAX) recorded a positive month-on-month change in July: its value closed the month at 111.26 points, representing an increase of 3.02% compared with the end of June. Before 16 July, when the monthly maximum (117.34 points) was recorded, the index had showed an upward trend with minor fluctuations. However, the following six days brought a change: the price of Slovafarma and VÚB shares fell on 24 July, when SAX hit an all-time low (104.91 points). The end of the month saw a positive change in the value of the index. The near-zero liquidity of all share titles failed to create long-term conditions for the stable course of the index; trading on the stock exchange floor is aimed mostly at maintaining the rates in an artificial manner.

SAX index

With regard to the structure of share and bondholders registered at the Securities Centre, the most significant month-on-month change was recorded in the number of bonds held by non-residents (a decrease of 46.25%). As regards securities held by domestic banks, the number of bonds decreased by 6.37% and that of shares increased by 6.425%.

6. Interbank foreign exchange market

In July, the foreign exchange market was marked by a moderate decline in trading between domestic commercial banks as well as between Slovak and foreign banks. The total volume of transactions concluded on Slovakia's foreign exchange market fell month-on-month by 7.3%, from US\$ 5,753.5 million to US\$ 5,334.8 million.

Foreign exchange market in the SR

In July, trading between Slovak commercial banks declined: the volume of transactions fell by 5.9%, from US\$ 2,474.0 million to US\$ 2,326.9 million. Most trading was again concluded in US\$ (80.2%, compared with 77.3% in June), followed by DM (13.8%, compared with 13.3 % in June) and other European currencies (6%, compared with 9.4% in June). The number of contracts decreased to 1,152 (from 1,177 in June), while the average amount per contract fell from US\$ 2.1 million to US\$ 2.0 million.

Transactions between Slovak banks

Transactions between Slovak and foreign banks

The volume of trading between Slovak and foreign banks fell by 8.7%, from US\$ 3,263.5 million to US\$ 2,977.6 million, but maintained its dominant position on the country's foreign exchange market (55.8%). Most trading was again concluded in US\$ (89.3%), followed by DM (10.0%), and other European currencies (0.7%). The number of transactions decreased from 984 to 963, with an average amount of US\$ 3.1 million per contract. Trading between Slovak and foreign banks resulted in a positive balance of US\$ 168.0 million, which indicates that the inflow of foreign capital continued (as during the 1st half of 1998) in July.

7. Balance of payments for January to May

The current account balance deficit continued to grow,

During the first five months of 1998, the external relations of the Slovak Republic were characterised by a deepening of trends that increase the imbalance on the current account of the balance of payments. The inability of the economy to obtain foreign exchange resources from exports resulted in a current account deficit of Sk 31.9 billion, i.e. US\$ 913.7 million.

The low competitiveness of the Slovak economy on foreign markets was associated with the effort to cover the current account deficit from the inflow of short and long-term capital on the capital and financial account. Its volume (Sk 40.5 billion) was large enough to fully cover the negative balance on current account, and it contributed to the increase in foreign exchange reserves at the central bank (Sk 13.6 billion).

The net inflow of foreign exchange on the capital and financial account increased the level of the country's external debt. However, the structure of foreign capital inflow was dominated by long-term capital allocated for the government and corporate sectors.

7.1. Current account

... due mainly to the negative balance of trade

The result achieved on the current account was influenced to a significant extent by the trade-balance deficit, which amounted to Sk 32.3 billion. During the first five months of 1998, Slovakia's foreign-trade turnover reached Sk 322.6 billion; of this amount, imports accounted for Sk 177.4 billion and exports Sk 145.2 billion. The structure of exports by commodity (according to the two-digit code of SITC) was dominated by vehicles (14.7%), iron and steel (13.0%), and electrical instruments and appliances (5.7%). Slovak exports were directed mostly to Germany (27.3%), the Czech Republic (21.2%), and Austria (7.5%). The structure of imports by commodity was dominated by vehicles, including handling equipment (11.3%), electrical instruments and appliances (6.7%), crude oil and oil products (5.5%). With regard to structure by country, imports were dominated by Germany (23.4%), the Czech Republic (18.8%), and the Russian Federation (11.9%).

Balance of services

The unfavourable balance of services, which had persisted since the beginning of the year in the form of an excess of payments for services received over income from services rendered, resulted in a deficit of Sk 3.1 billion at the end of May, i.e. Sk 3.6 billion more than in the same period a year earlier. Compared with last year's moderate surplus, the negative balance of services was reflected in all aggregate items of the services balance. More than a half (52%) of the increase in the services-balance deficit was generated in the balance of foreign tourism (in other services, the increase in the size of deficit accounted for 40%, compared with 8% in transport).

During the five months under review, the negative balance of tourism reached Sk 686.0 million, representing a deterioration of Sk 1,850.0 million. This development was due mainly to a fall in revenue from active tourism (Sk 1,622.0 million). During the same period, the expenses of Slovak tourists abroad increased by Sk 228.0 million).

Income balance

The income balance resulted in a deficit of Sk 1.4 billion, which was comparable with the figure recorded in the same period a year earlier (Sk 1.3 billion). The size of the deficit was determined by the balance of interest on financial credits (Sk -1.1 billion), which was affected substantially by the growing indebtedness of the corporate sector.

Regarding the individual items of the current account, surplus was achieved only in the balance of current transfers (Sk 4.8 billion). Transfers from abroad were realised largely as foreign currency transfers in the form of subsidies, donations, compensations, etc. for private individuals as well as legal entities.

Current transfers

7.2. Capital and financial account

The capital and financial account of the balance of payments generated a surplus of Sk 40.5 billion, i.e. US\$ 1,184.2 million, while almost 88.7% of the transactions were realised in the form of long-term capital.

Surplus in the capital and financial account

In the area of long-term capital, a significant role was played by the government and corporate sectors. At the end of May, the Slovak Government floated, through Nomura International Plc., medium and long-term bonds on foreign markets in the amount of Sk 25.8 billion. The inflow of long-term funds into the corporate sector took place mainly in the form of financial credits. Through corporate borrowing, the Slovak economy obtained long-term resources in the total amount of Sk 18.7 billion, while almost 50% of these funds were allocated for transport and communications. Increases were also recorded in credits granted for the generation and distribution of electricity, gas and water supply, with a 26% share in total borrowing. In industry, the share of loans from abroad reached only 22% of total borrowing and the loans were used mainly for coke production and petroleum refining.

Inflow of long-term capital into the government and corporate sectors

In comparison with the previous year, there was a marked inflow of capital in the form of direct foreign investment. The capital interests of foreign investors in Slovakia (above 10%) increased by Sk 7.3 billion, and were realised largely (63%) in industrial production, particularly in metal working and the processing of food and beverages.

Direct investment

During the first five months of 1998, the increase in Slovak investments abroad continued. The volume of direct investments abroad increased by Sk 2.0 billion, due primarily to growth in the capital interests of Slovak companies abroad in the wholesale and retail trade sectors.

Within portfolio investments, capital stakes of foreign investors in the SR (up to 10%) decreased by Sk 1.7 billion during the period from January to May.

The short-term financial account, which reflects the movement of short-term capital in the banking, corporate, and government sectors, recorded an outflow of capital in the amount of Sk 2.5 billion.

Short-term capital

A factor determining the development of short-term capital in 1998, was the movement of short-term capital within the banking sector. On the side of factors increasing liabilities, a significant role was played by short-term deposits held by non-residents with Slovak banks (Sk 25.9 billion) and the purchase of foreign exchange from foreign banks on the interbank foreign exchange market (Sk 9.3 billion). The increase in liabilities in the banking sector was partly offset by repayments of short-term loans to foreign banks in the amount of Sk 10.6 billion. The growth in bank assets (Sk 17.4 billion) was due primarily to deposits held by Slovak banks abroad (Sk 14.3 billion) and short-term financial credits granted in the amount of Sk 2.8 billion.

Within the short-term financial account, the corporate sector acted as creditor providing commercial loans to its foreign partners in the total amount of Sk 3.5 billion.

The total outflow of funds on the short-term financial account was supported by the repayment of short-term government debt. Of the volume of long-term borrowings (Sk 25.8 billion), the Government repaid a short-term bridging-loan in the amount of Sk 13.0 billion.

8. Net foreign debt of Slovakia as at 31 May 1998

The net external debt of the SR - calculated as the difference between gross foreign debt, i.e. US\$ 11.2 billion (liabilities of the Government and the NBS, liabilities of commercial banks and the corporate sector - import commitments and financial credits), and foreign assets, i.e. US\$ 9.0 billion (foreign exchange reserves of the NBS, foreign assets of commercial banks and the corporate sector - export claims and financial credits), reached US\$ 2.2 billion at the end of May 1998.

Total gross foreign debt	8.5	9.0	9.4	9.5	9.7	10.3	10.7	9.9 */	10.5	10.5	10.4	10.7	11.2
- official debt of the Government and the NBS	1.6	1.6	1.6	1.6	1.8	1.9	1.8	1.8	1.8	1.8	1.7	1.7	2.2
- foreign debt of enterprises	4.0	4.3	4.3	4.4	4.5	4.9	5.1	5.1	5.2	5.3	5.3	5.4	5.6
- foreign debt of commercial banks	2.7	3.0	3.2	3.3	3.3	3.4	3.6	2.9	3.5	3.4	3.4	3.5	3.3
Total gross debt per capita (in USD)	1,601	1,705	1,766	1,789	1,826	1,937	2,023	1,867	1,990	1,982	1,972	2,000	2,082

*/ At the end of December 1997, the actual level of foreign debt was higher by roughly USD 800 million. The level of foreign debt was reduced to USD 9.9 billion artificially, due to an accounting operator performed by a foreign bank based in the SR in December 1997.

- a - In the specified unit
 b - Index previous month = 100
 c - Index same period of last year = 100
 d - Cumulative from the beginning of year in Sk million
 e - Index same period of last year = 100 (cumulative)
 f - In the specified unit at constant prices - average 1995 prices
 g - Share of private sector in production (%)

Note: Preliminary data

a - In the specified unit in current prices

b - From the beginning of the year in Sk millions

c - Index same period of previous year = 100 (cumulative)

d - Share of total volume in period (%)
