1. Monetary development

In November, consumer prices increased month-on-month by 0.4% and the 12-month rate of inflation reached 5.9%. In view of the change in the country's foreign exchange regime in October, the NBS revised its original estimates for the year-end rate of consumer-price inflation, to 6.8 - 9.4%. However, current price developments indicate that the year-end rate of inflation may remain below the lower limit of this interval, and will be close to the figure projected in the Monetary Programme of the NBS (5.6 - 5.9%).

Monetary development in November was characterised by a favourable trend in consumer prices, ...

The exchange rate of the Slovak crown (Sk) against the German mark (DM) depreciated by 1.3% during November. The situation on the interbank foreign exchange market was also affected by a lack of interest on the part of foreign investors. The situation on the domestic money market also added to the depreciation in the crown, since the fall in the price of crown deposits (by roughly 10 percentage points in the case of 1-month deposit rates) reduced the level of demand for Slovak currency.

... moderate depreciation in the crown's exchange rate,

1.1. Factors affecting the development of the money supply

At the end of November, the money supply in terms of M2 (at fixed exchange rates) reached Sk 452.2 billion, representing a 12-month rate of growth of 4.8%. In comparison with the previous month, the dynamics of the money supply slowed by 0.7 percentage points. In November, the development of M2 was affected by both domestic resources and net foreign assets, which recorded (after 4 months of decline) a month-on-month increase of Sk 5.0 billion.

... and by stable development of monetary aggregates

The increase in net foreign assets was a result of faster growth in foreign assets (by Sk 9.9 billion) than in foreign liabilities (by Sk 4.9 billion). The increase in net foreign assets of commercial banks (Sk 5.7 billion) was partly offset by a decline in net foreign assets of the NBS (Sk 0.7 billion).

Increase in net foreign assets

In November, the foreign exchange reserves of the NBS (at fixed exchange rates) increased month-on-month by Sk 0.4 billion. In the revenue section, the most significant item was the drawing of foreign loans by the public sector (Sk 1.5 billion), whilst the expenditure section was dominated by debt service payments by the Government and the NBS (Sk 0.9 billion).

Net foreign assets of commercial banks increased month-on-month by Sk 5.4 billion, while foreign assets grew by Sk 9.5 billion and foreign liabilities by Sk 3.8 billion.

Unemployment and inflation (%)

Increase in net credit to the Government, ...

The growth in M2 over November was again supported by the development of net credit to the Government, which increased month-on-month by Sk 2.7 billion.

... due primarily to the performance of the State budget

At the end of November, the performance of the State budget resulted in a deficit of Sk 12.9 billion, representing a deterioration of Sk 3.9 billion in comparison with the figure for the previous month. Budget revenue reached Sk 162.3 billion and expenditure totalled Sk 175.2 billion.

Internal debt of the Government

The net position of the Government vis-a-vis the banking sector reached (according to preliminary data) Sk 72.2 billion, representing a month-on-month increase of approximately Sk 1.4 billion. The rise in the level of internal debt was affected by the growing deficit of the State budget, which increased demands for financing through Treasury-bill issues. Although the month-on-month increase of this item was relatively high (Sk 6.5 billion), the internal debt within the structure of other partial items that reduce the overall position of the Government, increased by approximately Sk 4.2 billion. During the month under review, the volume of government bonds held by non-bank entities, showed a moderate increase.

Apart from net credit to the Government, whose year-on-year dynamics slowed by 3.6 percentage points (to 31.2%) compared with October, the growth in net domestic assets was also supported by loans to households and enterprises. The 12-month rate of growth in bank lending to households and enterprises fluctuated at the level of 4.4%.

Development of NBS foreign exchange reserves

(US\$ millions)

Foreign exchange reserves of the NBS

At the end of November, the total foreign exchange reserves of the NBS (at current exchange rates) reached US\$ 2,938.7 million, representing a month-on-month decline of US\$ 48.0 million. The volume of foreign exchange reserves was 2.3 times greater than the average volume of monthly imports of goods and services to Slovakia during the first ten months of 1998.

1.2. Structure of the money supply

Month-on-month increase in the money supply, ...

In November, the M2 money supply (at fixed exchange rates) increased by Sk 3.2 billion, due primarily to growth in the M1 aggregate (Sk 3.1 billion). Quasi-money recorded only a negligible month-on-month increase (Sk 0.1 billion).

... accompanied by a slowdown in the rate of year-on-year growth

The rate of year-on-year increase in the money supply slowed somewhat in November (to 4.8%) compared with the figure for the previous month (5.5%). Quasi-money increased year-on-year by 12.0%, whereas the M1 aggregate recorded a year-on-year decline of 7.3%.

The volume of currency outside the banking sector increased by Sk 0.3 billion during November. The monthly cycle of currency issue was characterised by a minimum equal to the minimum in February, and a maximum equal to the figure for June. The average volume of currency remained below the level of the previous five months.

Demand deposits recorded a relatively significant month-on-month increase (Sk 2.8 billion) in November. The increase was of seasonal nature, but much lower than in the previous two years (Sk 5.4 billion in 1996 and Sk 5.3 billion in 1997). The increase in demand deposits took place during the first twenty days of November, while the last ten-day period saw a moderate decline.

Increase in demand deposits ...

Time deposits increased in November by Sk 1.2 billion, continuing the upward trend. The most significant increase took place during the second 10-day period in November (roughly Sk 4.0 billion); the last period saw a marked fall in time deposits (roughly Sk 3.0 billion).

... as well as in time deposits

Foreign-currency deposits fell month-on-month by Sk 1.1 billion in November. This was due probably to the stabilisation of the Slovak crown's exchange rate, subsequent reduction in fears of currency devaluation among the population, earnings from exchange-rate differences, demand for crown resources, and the interest-rate differential between crown deposits and foreign-currency deposits.

Decline in foreign-currency deposits

With regard to the individual components of the money supply, the weight of the M1 aggregate increased slightly in November. In comparison with the beginning of 1998 and the same period a year earlier, however, the weight of M1 in the money supply was much less. On the other hand, the weight of quasi-money recorded a moderate month-on-month decrease in November.

Structure of the money supply (M2)

(%)

	1.1.1998	31.10.1998	30.11.1998	30.11.1997
Money supply [M2]	100.00	100.00	100.00	100.00
Money [M1]	36.63	32.36	32.82	37.11
Currency outside banks [M0]	10.74	11.34	11.32	10.85
Demand deposits	25.89	21.02	21.49	26.26
Quasi-money [QM]	63.37	67.64	67.18	62.89
Time deposits	53.01	53.74	53.63	52.04
Foreign currency deposits	10.36	13.90	13.56	10.85

Slovak-crown deposits, as a component of the money supply, increased by Sk 4.0 billion in November, due to growth in household deposits (Sk 2.8 billion) and corporate deposits (Sk 1.1 billion). Since the beginning of the year, the volume of crown deposits has fallen by Sk 18.1 billion; corporate deposits have declined by Sk 28.6 billion and household deposits have grown by Sk 10.4 billion. The rate of year-on-year growth in crown deposits remained low, at 0.6% in November. Household deposits increased year-on-year by 11.8%, whilst corporate deposits recorded a decline of 19.0%.

Increase in crown deposits

1.3. Bank lending

In November, total bank lending (loans to enterprises, households, central and local authorities for extra-budgetary purposes, NBS loans, and other loans) increased month-on-month by Sk 2.5 billion, due to growth in crown loans (Sk 1.4 billion) and foreign-currency loans (Sk 1.1 billion). At the end of the month, the volume of bank loans totalled Sk 396.8 billion, of which loans in Slovak crowns accounted for Sk 340.0 billion and foreign-currency loans Sk 56.8 billion.

Growth in crown loans and foreign-currency loans

The increase in crown loans took place in the entrepreneurial sector (Sk 0.9 billion) and the household sector (Sk 0.6 billion).

Since the beginning of the year, the volume of total bank credit has increased by Sk 11.1 billion, due to growth in crown loans (Sk 0.9 billion) and foreign-currency loans (Sk 10.2 billion).

In the same period of the year 1997, crown loans had increased month-on-month by Sk 0.2 billion and loans in foreign-currency by Sk 2.3 billion. The volume of total bank credit increased year-on-year by 2.4%; crown loans declined by 1.0%, while loans in foreign currency increased by 28.8%.

1.4. Interest rate development in October

The average interest rate on the total volume of loans fell

In October, the average interest rate on the total volume of loans fell month-on-month by 0.15 points, to 16.92%. Lending rates for short-term loans fell by 0.53 points, to 21.33%; but those for medium-term loans rose by 0.35 points, to 16.65%. The level of interest rates on long-term loans fell by 0.4 points, to 12.01%.

The level of interest rates on new loans fell significantly

The average interest rate on new loans fell by 0.88 points (to 23.48%), and that on short-term loans by 1.15 points (to 23.91%). The average lending rate for medium-term loans rose by 1.37 points (to 14.92%), and that for long-term loans by 3.11 points (to 17.57%). However, the share of new medium (4.17%) and long-term loans (0.87%) in total crown credit was insignificant. Interest rate levels were mainly determined by a fall in interbank money market rates (by an average of 1.27 points) and reduction in average interbank deposit rates (by 6.8 points).

Of the total volume of new loans, 26% was granted at fixed interest rates and 74% at flexible rates. Most loans were granted by small and medium-sized banks.

With regard to the type of loan by purpose, average interest rates rose on operating loans (by 0.56 points, to 23.79%), but the average rate for overdrafts fell (by 6.07 points, to 24.89%). These loans accounted for 88.1% of the total volume of new loans, and were mainly loans with a maturity of 1 day to 3 months.

The average interest rate on total deposits increased

Owing to the efforts of commercial banks to maintain adequate liquidity, the average interest rate on total crown deposits increased month-on-month by 0.76 points, to 11.05% in October, due mainly to the conversion of demand and medium-term deposits into 7-day to 1-month deposits (1-week deposits grew by Sk 6.1 billion, though their price fell by 1.92 points, to 19.96%; but remained 0.08 points above the level of 1-month deposit rates, which was decisive for clients). Average interest rates on short-term deposits increased, especially on 1-month deposits (by 2.58 points, to 19.88%). In raising the level of interest rates on crown deposits, commercial banks were probably reacting to the marked reduction in the volume of short-term crown deposits (by Sk 10 billion) in September.

The level of real interest rates on one-year deposits rose

As a result of decline in the average rate of interest on the total volume of deposits (-0.15 points) and rise in the average rate for crown deposits (+0.76 points), the interest margin decreased from 6.78% in September to 5.87% in October. The level of real interest rates on one-year deposits rose from 5.20% in September to 5.76% in October, due to a marked increase in the average rate of interest on 1-year deposits (by 0.86 points, to 11.96%) and in the 12-month rate of consumer-price inflation (from 5.9% to 6.2%).

2. Implementation of monetary policy

The implementation of monetary policy had a favourable effect on the liquidity of commercial banks, ...

In November, monetary policy was applied in an environment characterised by an adequate level of liquidity in the banking sector, which reduced the uncertainty on the interbank money market and thus led to decline in interest levels.

In comparison with the previous month, commercial banks continued to depend on central bank refinancing to a somewhat lesser extent in November, when the average daily volume of refinancing fell to Sk 12.6 billion, from Sk 13.8 billion in October.

Development of the M2 monetary aggregate

(Sk billions)

Despite the uneven spread of liquidity and government securities in the banking sector, the average price of money fell to the level of August (after a marked rise in September), due to continuous central bank refinancing. Interest rates on 1-month deposits fell to 16.75% in November, from 26.65% in October.

In comparison with the previous period, the urgent need to cover budget expenditure exerted no pressure on the portfolio of the NBS. Apart from central bank refinancing, another source of liquidity for the banking sector in November was a marked month-on-month decline in the volume of currency in circulation, which amounted to Sk 1.8 billion in average terms.

... as well as the performance of the State budget and the volume of currency in circulation

In November, the level of required reserves in the banking sector was set at Sk 38,823 million. By the end of the month, the reserve requirements had been fulfilled to 101.28%. At the end of the first period in November, the reserve requirements had been fulfilled to 101.18%, with average excess reserves at the level of Sk 458 million. At the end of the second period, the reserve requirements had been fulfilled to 101.37% with average excess reserves amounting to Sk 534 million.

Fulfilment of reserve requirements

(Sk billions)

3. Inflation

Consumer prices rose by 0.4% month-on-month

In November, consumer prices increased month-on-month by 0.4%. Since the beginning of the year, the price level has risen by 5.4%. After a moderate increase in October (to 6.2%), the 12-month rate of consumer-price inflation fell back to the level of September (5.9%).

Price levels in the tradable sector rose at a faster rate than in the non-tradable sector

Compared with the October rise in price levels, the rate of increase in consumer prices slowed somewhat in November. The disparity between the rates of price increase in selected sectors of the consumer market remained unchanged. Prices in the tradable sector continued to rise at a faster rate than in the non-tradable sector. The persistent effects of increased exchange rate volatility and fears of inflation led to a rise in the prices of tradable goods (by 0.6%).

Price levels in the non-tradable sector rose by 0.2%, due mainly to the development of prices for market services. The highest increases were recorded in prices charged for the maintenance and repair of personal vehicles. Regulated prices remained at the level of the previous month, with the exception of prices for health services and meals at schools.

With regard to individual consumption by purpose, the highest price increases were recorded in the categories: clothing and footwear (0.9%); furnishings and general maintenance of flats and houses (0.8%); and recreation and culture (0.6%). Price levels in the category of foodstuffs and non-alcoholic beverages rose by 0.5%. The increase in food prices was due mostly to a rise in the price of vegetables. The price of meat and fruit fell in November. In other categories, monthly price increases were above 0.1%.

4. Money market

4.1. Primary market for Treasury bills

Treasury-bill auctions

In November, the Ministry of Finance of the SR put Treasury bills up for auction in accordance with the issuing schedule for the 4th quarter of 1998. Auctions were held once a week, in bills with a maturity of 28 and 91 days. At these auctions, Treasury bills were placed on the short-term securities market in the total amount of Sk 12.561 billion. Of this amount, two issues of 91-day bills in the total amount of Sk 5.131 billion were intended for financing the deficit of the State budget as at 31 December 1998, i.e. with maturity in 1999.

The average yield achieved on the primary Treasury-bill market in November was 17.31% p.a., representing a fall of 326 base points in comparison with the previous month. The fall was due mainly to favourable developments on the market for interbank deposits.

4.2. Secondary market

After marked fluctuations in the level of interest rates on the interbank market during the previous month, the situation began to stabilise gradually in November. However, the shortage of liquidity in the banking sector persisted; consequently, the NBS intervened in the money market by conducting fifteen 14-day REPO tenders and three individual REPO tenders for refinancing purposes. Yields from REPO tenders fluctuated between 10.59% and 8.96%.

Stabilisation of the interbank market through the refinancing policy of the NBS

During the first period, the situation in the sector improved in terms of the required level of refinancing, due to the maturity of NBS bills in the amount of Sk 2.65 billion. The NBS continued to grant refinancing through REPO tenders in the total amount of Sk 13.43 billion, by utilising any legally approved type of bonds in which trading is allowed. In the first period, the daily balance of interventions amounted to an average of Sk 11.69 billion in favour of refinancing. Improvement in the situation on the interbank market led to a fall in the level of deposit rates and reduction in interest margins, especially of longer-term deposits: from 5.30% to 2.47% (by 2.83%) in the case of 6-month deposits. Interest rates on 1-week deposits fell from 18.70% to 15.25% (by 3.45%) and those on 6-month deposits from 28.10% to 22.07% (by 6.03%). To replenish the level of liquidity with the aim of meeting reserve requirements, the NBS also conducted two individual REPO tenders for refinancing purposes during the first period of the month.

Development of average interbank offered rates (BRIBOR) (% p.a.)

During the second period, the possibilities for granting refinancing to banks through REPO tenders increased, due to Treasury-bill issues with a maturity of 91 days. The NBS provided refinancing to the banking sector through 14-day REPO tenders in the total amount of Sk 12.43 billion. Deposit rates showed a tendency to fall again, while the average daily balance of refinancing was Sk 12.54 billion. One-week deposits were listed at 15.15% at the beginning of the second period, and at 11.82% on the last day (a fall of 3.33%). Six-month deposit rates fell by 4.00%, from 22.10% to 18.10%. To ensure an adequate level of liquidity in the banking sector for the fulfilment of the reserve requirements, the NBS conducted a single REPO tender during the second period.

Towards the end of the month, the NBS made an issue of central bank bills (NBS bills) for its own portfolio in the amount of Sk 5.0 billion, to counterbalance the unexpected fluctuations in the level of liquidity in the banking sector.

5. Capital market

5.1. Primary market

Government bonds In November, the Ministry of Finance floated no government bonds. The issuance of government securities was completed in accordance with the issuing schedule for 1998, published at the end of October.

Non-government bonds November saw only one issue of publicly negotiable non-government bonds. The issue was floated by Slovnap in the amount of Sk 60 million. With regard to the strong position of government bonds on the capital market, the issue of non-government bonds was limited.

5.2. Secondary market

In November, the volume of trading on Bratislava Stock Exchange (BCPB) totalled Sk 29.6 billion, representing the third largest figure among the balances for the individual months of 1998. The second largest monthly volume was recorded in anonymous transactions concluded a month earlier (Sk 3.2 billion). Most trading took place again in listed bonds. At the end of the calendar year, the volumes of direct transfers usually increase. In November, the largest share in the total volume of trading was reached by listed bonds (78%).

Bonds In November, trading on the BCPB floor was again dominated by bond transactions. The total volume of contracts amounted to Sk 25.2 billion, of which Sk 2.9 billion worth of bonds were traded on the BCPB floor. The largest volumes were traded in government bonds - Issue No. 65 (Sk 1.4 billion), Issue No. 57 (Sk 0.5 billion), and Issue No. 64 (Sk 0.3 billion). In November, direct transactions were dominated by government bonds - Issue No. 65 (Sk 3.7 billion), Issue No. 11 (Sk 2.3 billion), and ĚSOB 1999 bonds (Sk 2.9 billion).

During the month under review, the market value of all bonds registered on the stock market increased slightly (by an average of 0.9%), to Sk 105.4 billion; the market value of listed bonds rose by 1.2%, to Sk 89.6 billion.

SDX index In November, both components of the Slovak Bond Index (SDX) recorded positive changes. The average price of government bonds closed the month at 121.17% (+2.78%) with an average yield of 20.753% to maturity. The average price of corporate and bank bonds closed the month at 121.56% (+3.24%) with an average yield of 19.140% to maturity.

Shares In November, shares were traded in the total amount of Sk 4.4 billion; anonymous transactions accounted for Sk 355.8 million of this amount. The total market value of shares issued since the end of October fell by an average of 2.6%, to Sk 151.2 billion; the sharpest fall was again recorded in the value of listed shares (7.7%, to Sk 21.2 billion). With effect from 1 November, shares were re-categorised on both the registered securities market and the open market; the main criteria applied were tradability and the fulfilment of notification requirements since the beginning of 1998.

SAX index Over the course of the month, the value of the Slovak Share Index (SAX) recorded several fluctuations, which were usually in line with the variations in the rates of major companies, i.e. Slovnaft and VSŽ. During the entire 21 days, the value of SAX fluctuated below the level of 90 points. The index closed the last trading day of November at 82.64 points, representing a fall of 7.6% month-on-month and 50.6% year-on-year. The value of SAX reached its monthly maximum at 89.28 points on 5 November, when the monthly average prices of VSŽ, Slovnaft, and

Závody SNP shares reached their highest figures (Sk 212, Sk 650, and Sk 70 respectively). Sharp falls in the value of SAX towards the 80-point limit were recorded on 19 and 20 November, due mainly to a fall in the price of VSŽ shares (from Sk 198 to Sk 148) and Nafta shares (from Sk 415 to Sk 350). Thus the November minimum of 81.45 points (20 November) has become the lowest value of SAX ever recorded.

Slovak Share Index - SAX (%)

With regard to the structure of share and bondholders registered at the Securities Centre, the most significant month-on-month change was recorded in the number of bonds held by legal entities (an increase of 53.90%). The number of bonds acquired by the NBS through REPO transactions, decreased by 22.88%. As a result, the volume of bonds held by commercial banks grew by 14.81%. The number of government bonds held by non-residents also recorded a marked decrease (50.48%). The structure of share-holders remained virtually unchanged in November.

Structure of share and bondholders

6. Interbank foreign exchange market

The exchange rate of the Slovak crown (Sk) weakened in relation to DM by 1.3%, i.e. from 21.171 (30 October) to 21.460 (30 November). In November, the NBS was not involved in trading on the foreign exchange market. The foreign exchange market was characterised by a marked increase in trading between Slovak commercial banks. Regarding the structure of trading by currency, most transactions between domestic banks were made in DM. The total volume of transactions concluded on the country's foreign exchange market increased month-on-month by 20.7%, from US\$ 5,621.1 million to US\$ 6,784.6 million.

Foreign exchange market in the SR

In November, trading between Slovak commercial banks increased by 48.5%, from US\$ 2,603.6 million (in October) to US\$ 3,867.6 million, and regained its dominant position on the foreign exchange market. In contrast with previous months, most transactions were concluded in DM (51.2%, compared with 31.1% in October), followed by US\$ (46.7%, compared with 67.7% in October) and other European currencies (2.1%, compared with 1.2% in October). The shift in trading from US\$ to DM was caused by the introduction of DM as a reference currency. The number of contracts decreased from 1,648 (in October) to 1,357 in November, while the average amount per contract increased from US\$ 1.6 million to US\$ 2.9 million.

Transactions between Slovak banks

Trading between domestic and foreign banks increased from US\$ 2,805.9 million to US\$ 2,917.0 million, and relinquished its dominant position on the foreign exchange market of the SR (43%). Most trading was again concluded in US\$ (70.2%), followed by DM (29.7%), and other European currencies (0.1%). The

Transactions between Slovak and foreign banks

number of transactions decreased from 1,190 to 981, with an average amount of US\$ 3.0 million per contract. In contrast with previous months, trading between Slovak and foreign banks in November resulted in a positive balance of US\$ 59.8 million, which indicates that foreign banks sold more foreign exchange to Slovak commercial banks than they purchased; this led to an inflow of foreign capital designed to profit from the advantageous interest-rate differential.

7. Balance of payments for January to September 1998

The current account deficit continued to grow,

During the period from January to September, the external relations of the Slovak Republic were characterised by continued growth in the tendencies that increase the imbalance in the current account of the balance of payments, which resulted in a deficit of Sk 53.9 billion, i.e. US\$ 1.5 billion.

The capital and financial account of the balance of payments generated a surplus of Sk 49.2 billion, i.e. US\$ 1.4 billion. In contrast with previous months, when capital inflows from abroad sufficed not only to cover the deficit in the current account, but to generate an increase in foreign exchange reserves as well, September saw an outflow of capital from Slovakia, accompanied by increased interest in foreign exchange on the part of households and entrepreneurs, which led to a fall in central bank reserves (by an equivalent of Sk 21.3 billion). Since the beginning of the year, the foreign exchange reserves of the NBS have declined by Sk 11.0 billion, and their volume at the end of September was only 2.5 times greater than the average volume of monthly imports of goods and services to Slovakia during the first nine months of 1998.

... due mainly to the negative balance of trade

The balance-of-payments current account continued to be affected by the balance of trade, which resulted in a deficit of Sk 55.0 billion. Data on foreign trade indicate that, though the size of the September deficit (Sk 4.3 billion) fell behind the figure for the previous month, the trade-balance deficit increased year-on-year by a total of Sk 2.2 billion over the period from January to September.

Balance of services

The unfavourable balance of services, persisting since the beginning of the year, in the form of an excess of payments for services received over income from services provided, resulted in a deficit of Sk 2.7 billion at the end of September. After some improvement in August, the balance of foreign tourism over the nine months under review resulted again in a deficit of Sk 0.7 billion, due to increased demand for foreign exchange among the population in September.

Surplus in the capital and financial account

The capital and financial account of the balance of payments generated a surplus of Sk 49.2 billion, i.e. US\$ 1.4 billion. During the period from January to September, foreign companies invested (in the form of capital participation) roughly Sk 9.9 billion in the Slovak economy, of which Sk 9.3 billion was employed in the corporate sector. Increased investment took place in industrial production (74% of the capital employed in the corporate sector), predominantly in metal-working and in the processing of food and beverages. Besides industrial production, a significant increase was recorded in foreign direct investment in the trade sector, which absorbed 16.4% of direct investments made in the corporate sector.

Long-term capital

In the long-term capital sector, a significant role was again played by the government and corporate sectors. Since the beginning of the year, the total volume of loans drawn by the Government and the NBS has increased by Sk 35.6 billion, and has raised the level of medium and long-term debt in the official sector by Sk 27.3 billion (excluding repayments in the amount of Sk 8.3 billion). Since the beginning of the year, the volume of borrowings from abroad in the corporate sector has increased by Sk 34.5 billion, increasing the level of indebtedness by Sk 24.3 billion (excluding repayments). In the corporate sector, financial credits have grown by Sk 28.9 billion since the beginning of the year, and were utilised mostly in transport and communications (30%), electricity generation and distribution, gas and water supply (25%). Industry saw a further increase in the financing of coke production, oil refinery, and metal working.

In September, the most significant changes were recorded in the individual segments of short-term capital, primarily in the banking sector. The structure of short-term liabilities of commercial banks was dominated by deposits held by non-residents with Slovak banks, which fell by Sk 26.4 billion in September. The volume of deposits has increased by Sk 0.6 billion since the beginning of the year. Commercial banks compensated for the outflow of short-term capital through foreign exchange fixing, where they purchased foreign exchange from the NBS in the equivalent of Sk 17.2 billion, which contributed significantly to the fall in central bank reserves, to US\$ 3.1 billion in September.

Short-term capital

8. Net foreign debt of Slovakia at 30 September 1998

The net external debt of the SR - expressed as the difference between gross foreign debt, i.e. US\$ 11.9 billion (liabilities of the Government and the NBS, liabilities of commercial banks and the corporate sector - import commitments and financial credits), and foreign assets, i.e. US\$ 8.6 billion (foreign exchange reserves of the NBS, foreign assets of commercial banks and the corporate sector - export claims and financial credits), reached US\$ 3.3 billion at 30 September 1998. At the beginning of 1998, the volume of net external debt stood at US\$ 1.9 billion, so there was an increase of US\$ 1.4 billion in the first nine months of the year.

Net external debt

With regard to the structure of Slovakia's gross external debt, total gross medium and long-term foreign liabilities amounted to US\$ 7.085 billion, and short-term liabilities totalled US\$ 4.773 billion at the end of September. Per-capita gross external debt amounted to US\$ 2,201. Total short-term debt accounted for 40.25% of the country's gross external debt at the end of September.

Gross external debt

- a - In the specified unit
b - Index previous month = 100
c - Index same period of last year = 100
d - Cumulative from the beginning of year in Sk million
e - Index same period of last year = 100 (cumulative)
f - In the specified unit at constant prices - average 1995 prices
g - Share of private sector in production (%)

Note: Preliminary data

a - In the specified unit in current prices

b - From the beginning of the year in Sk millions

c - Index same period of previous year = 100 (cumulative)

d - Share of total volume in period (%)
