1 SUMMARY

The year-on-year rate of euro area inflation, as measured by the Harmonised Index of Consumer Prices, reached 1.4% in June, compared with 1.6% in May. The weakening of the euro exchange rate vis-à-vis the US dollar came to a halt in June. The ECB's Government Council decided at its July meeting to leave the key ECB interest rates unchanged. The minimum bid rate for the main refinancing operations remained at 1.00%, and the rates for the marginal lending and deposit facilities at 1.75 % and 0.25% respectively.

In June, the year-on-year rate of HICP inflation accelerated slightly, to 2.4% in Poland and to 5.0% in Hungary. Price inflation in the Czech Republic remained unchanged in comparison with the same period a year earlier, at 1.0%. The Czech koruna, Polish zloty and Hungarian forint continued to depreciate in June, in relation to the euro. Key interest rates in Czech Republic, Hungary and Poland remained unchanged.

Compared with the previous month, Slovakia's annual HICP inflation rate remained unchanged in June, at the level of 0.7%. The year-onyear decline in energy prices accelerated in June, owing to a decrease in the year-on-year dynamics of fuel prices. Non-energy industrial goods prices, as well as food prices, recorded a slight increase in their year-on-year dynamics. The acceleration in food prices took place in both processed and unprocessed food prices. Prices for services remained unchanged in year-on-year terms. The year-on-year decline in industrial producer prices continued to slow in May. Prices for construction works recorded a certain slowdown in the year-on-year rate of increase. The year-on-year dynamics of agricultural prices increased slightly in May, compared with the previous month.

Compared with the previous month, the current account balance deteriorated in May. The increased current account deficit was mainly the result of a decrease in the trade balance surplus, supported by an increase in the negative income balance. The overall current account balance was positively influenced by the current transfers and services balances. The industrial production index recorded a yearon-yearincreaseinMay, owing to the strengthening global demand. Industrial production again experienced strong growth on a year-on-year basis, mainly as a result of an increase in the dynamics of manufacturing production, mainly in the electronics, transport vehicles, and machinery and equipment industries. This improvement was also supported by the base effect of a shortterm decline in production a year earlier. The year-on-year decline in construction in May was deeper than in the previous month. The year-onyear rate of revenue growth in selected sectors accelerated in May, mainly as a result of positive developments in industrial revenues. The positive developments, i.e. faster year-on-year growth or slower year-on-year decline in revenues were recorded in all sectors, except in construction, which reflects the subdued domestic demand. The overall economic sentiment indicator rose in June, compared with the previous month. The upward path of the indicator was influenced by an increase in confidence in all components, i.e. in retail trade, services, and in consumer confidence, as well as in industry and construction.

Average nominal and real wages showed weaker year-on-year dynamics in May, compared with the previous month. The negative year-on-year dynamics of employment in the sectors under review continued to moderate in May. Slower decline than a year earlier was recorded in virtually all sectors, except in selected market services and accommodation. The rate of registered unemployment reached 12.2% in May, representing a decrease compared with the previous month.

As regards the sectoral breakdown of deposits, May saw an increase in the deposits of nonfinancial corporations, as well as in household deposits, especially in deposits redeemable on demand. After weakening for five months, the year-on-year dynamics of household deposits returned to positive territory. The year-onyear growth rate of non-financial corporate deposits has also been accelerating over the last two months. The marked increase in deposits redeemable on demand was a key factor in the

NBS

development of the M3 monetary aggregate during May. Bank lending to the private sector grew month-on-month in May, mainly as a result of an increase in the volume of loans to households. Loans to non-financial corporations also recorded a slight month-on-month increase. In year-on-year terms, loans to households increased, too. The negative dynamics of lending to non-financial corporations weakened somewhat. Retail interest rates on loans to households continued to fall in May, with the most significant fall recorded in the price of house purchase loans. Interest rates on loans to non-financial corporations rose slightly in May. Retail deposit rates were stagnant or fell slightly in May, for both sectors.

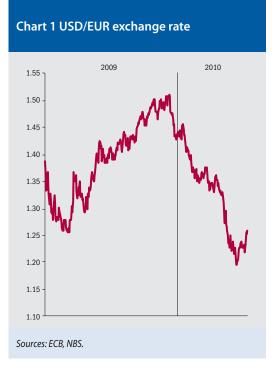

2 The external economic environment¹

2.1 THE EURO AREA

The year-on-year rate of euro area inflation, as measured by the Harmonised Index of Consumer Prices (HICP), moderated by 0.2 of a percentage point compared with May, to 1.4% in June. A yearon-year fall in price levels was recorded only in Ireland (2%). Rapid price increases took place in Greece (5.2%), Belgium (2.7%) and Luxembourg (2.3%). The year-on-year rise in euro area prices was caused by increases in the following categories: transport (3.9%), alcohol and tobacco (3.7%), and miscellaneous goods and services (2.2%). At the same time, year-on-year price falls in the euro area were recorded in post and telecommunications (-1.1%), and in recreation and culture (-0.2%). In the same period a year earlier, inflation reached a slightly negative value (-0.1%).

The weakening of the euro against the US dollar came to a halt in June. At the beginning of the month, the euro depreciated by 17% compared with the beginning of the year, to USD/EUR 1.1942 (an annual minimum), mainly as a result of positive news about the US economy. Consequently, financial market sentiment began to improve.

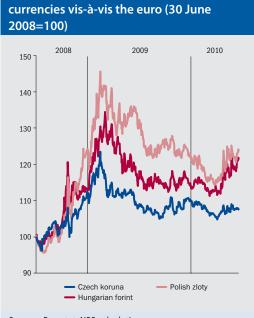

This had a favourable effect on the euro, except for minor fluctuations during the second and last third of the month. Over the course of June, the euro weakened against the US dollar by 0.3%. Compared with the beginning of the year, the single European currency depreciated by 14.7% vis-à-vis the dollar (compared with the same period a year earlier, the euro weakened by 13.2%).

The ECB's Governing Council decided at its meeting on 8 July 2010 to leave the key ECB interest rates unchanged. The rates for the main refinancing operations, the marginal lending facility and the deposit facility remained at 1.00%, 1.75 % and 0.25 % respectively. On 10 July 2010, the Governing Council approved three 3-month longer-term refinancing operations (LTROs) for the third quarter of 2010, to be carried out as fixed-rate tenders with full allotment.²

2.2 DEVELOPMENTS IN THE CZECH REPUBLIC, HUNGARY AND POLAND

In Poland and Hungary, the annual rate of HICP inflation accelerated by 0.1 of a percentage

Chart 2 Exchange rate indices of the V4

Sources: Eurostat, NBS calculations. Note: A fall in value denotes appreciation.

- The chapter on international economic developments includes a tabular / graphical overview, which is available in the Statistics annex, External environment.
 More information is available at
- 2 more information is available at the website: www.ecb.int NBS

point in June, to 2.4% and 5.0% respectively. In the Czech Republic, price inflation stagnated at the level of 1%. The steepest price increases occurred in the 'unprocessed food' category in all three countries. At the same time, energy prices recorded a marked slowdown.

The currencies of central European countries outside the euro area continued to weaken in June, as in the previous month. These currencies were still affected by heightened risk aversion on the part of international investors towards the region. Their exchange rates were also influenced by domestic and/or regional factors (e.g. uncertainty about fiscal developments in Hungary, parliamentary elections in the Czech Republic). The second week of June saw a temporary appreciation in all three currencies. Towards the end of the month, however, they again depreciated vis-à-vis the euro. Compared with the last trading day of May, the Hungarian forint weakened most severely (by 3.8%), followed by the Polish zloty (by 1.7%) and the Czech koruna (by 0.7%).

In the neighbouring countries, none of the central banks modified its key interest rates in June. Thus, central bank rates remained at historically low levels: 0.75% in the Czech Republic, 3.5% in Poland, and 5.25% in Hungary.

3 ECONOMIC DEVELOPMENTS IN SLOVAKIA

3.1 PRICE DEVELOPMENTS

3.1.1 CONSUMER PRICES

Consumer prices, as measured by Harmonised Index of Consumer Prices, remained unchanged in June on a month-on-month basis, with goods prices falling by 0.1% and services prices rising by 0.2%. The HICP inflation rate was lower than expected by NBS, mainly as a result of a slower than projected rise in fuel, food and services prices.

The year-on-year inflation rate remained unchanged in comparison with the previous month, at 0.7%. This was the result of stagnation in the year-on-year dynamics of services prices, acceleration in the year-on-year rate of increase in non-energy industrial goods and food prices, and acceleration in the year-on-year pace of decline in energy prices. Non-energy industrial goods prices were influenced by a slight increase in the 12-month dynamics of non-durable goods prices and a slowdown in the year-on-year decline in semi-durable and durable goods prices. In energy prices, the year-on-year dynamics of fuel prices weakened substantially. In food prices, the year-on-year rate of increase in processed and unprocessed food prices accelerated. In processed food prices, the prices of milk, dairy products, eggs, bread, bakery products, cereals, fats and sugar products rose year-onyear at an accelerated pace. Unprocessed food prices showed stronger dynamics as a result of a faster year-on-year increase in vegetable prices and a slower decrease in meat prices. Prices for services showed the same year-on-year dynamics as in the previous month (for the sixth consecutive month); they were influenced by the stagnating year-on-year rate of price increase in all service sectors, except in housing-related services, whose prices fell somewhat.

The average 12-month inflation rate in the period from July 2009 to June 2010 reached 0.3%, the same figure as in the previous month.

In the coming month, HICP inflation is expected to accelerate slightly in year-on-year terms, owing to an increase in the year-on-year dynamics of food and services prices. At the same time, nonenergy industrial goods and energy prices are likely to show somewhat weaker dynamics on a year-on-year basis.

In June 2010, the consumer price index (CPI) remained unchanged on a month-on-month

Table 1 Producer price developments in May 2010 (%)						
	Month-on- month changes		Year-on-year changes			
	April 2010	May 2010	May 2009	April 2010	May 2010	Average since begin. of 2010

- Prices of animal products	-	-	-22.5	1.6	2.1	-4.5
Source: Statistical Office of the SR.						

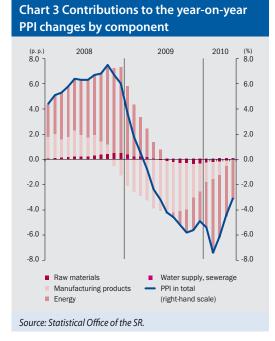

basis, as a result of stagnation in both regulated prices and core inflation. The 12-month consumer-price inflation rate stood at 1.0% (compared with 1.2% in May 2010).

3.1.2 PRODUCER PRICES

In May 2010, industrial producer prices for the domestic market rose by 0.3% compared with the previous month, while the overall decline in industrial producer prices slowed further on a year-on-year basis.

A modest year-on-year rise in the domestic prices of manufacturing products in May, compared with April 2010, was caused by increases in the prices of metals and metal products (by 1.6 percentage points, to 1.3%), wood and paper products (by 3.4 percentage points, to 2.1%), and refined oil products (by 1.5 percentage points, to 49.7%). Slower declines than a month earlier were recorded in the prices of food products (by 0.7 of a percentage point, to -3.1%), transport vehicles (by 0.6 of a percentage point, to -3.0%), and rubber and plastic products (by 1.0 percentage point, to -4.1%).

Energy prices experienced a slowdown in the 12-month rate of decline in May 2010, compared with the previous month. The slowdown was caused by a year-on-year rise in prices for gas supply and the distribution of gaseous fuels

via pipelines (by 2.4%, following a fall of 4.5% in April). The year-on-year decline in electricity prices slowed somewhat, while prices for steam and air-conditioning supply continued to fall.

The prices of agricultural products rose by 1.1% year-on-year in May 2010, as a result of a year-on-year increase in animal products prices (2.1%) and a decrease in plant products prices (-3.8%), which was smaller than a month earlier.

The rise in global oil prices and the moderating decline in food prices (compared with the same period a year earlier) created conditions for a further slowdown in the year-on-year decline in industrial producer prices in June 2010, compared with the previous month.

According to the latest agrarian market news, the impact of floods on plant commodity prices will be assessed on the basis of the quantity and quality of this season's crops in Slovakia and the neighbouring countries. The purchase prices of cereals are not expected to change substantially in the near future. As for animal products, beef prices (for live animals) are expected to remain unchanged and pork prices to continue falling year-on-year at a more moderate pace. On the whole, agricultural prices are likely to rise somewhat on a year-on-year basis in June 2010.

3.2 THE REAL ECONOMY AND THE LABOUR MARKET

3.2.1 TRADE BALANCE

The current account balance achieved in May was less favourable than the figure for the previous month. The month-on-month deterioration in the current account balance was caused mainly by a decrease in the trade balance surplus, combined with an increase in the income balance deficit (increased dividend payments to foreign investors). At the same time, the deficit increase on current account was moderated by an improvement in the current transfers balance (increased drawdowns from eurofunds) and, to a lesser extent, in the services balance.

After weakening in April, export dynamics strengthened again in May, by 14.3 percentage points month-on-month, to 29.7% (a small part of this acceleration was due to a base effect). Like

NBS

Table 2 Balance of payments current account (EUR millions)						
	April	Мау				
	2010	2010	2009			
Balance of trade	227.6	83.4	137.1

Sources: NBS and the Statistical Office of the SR.						

exports, imports also showed much stronger dynamics in May (33.0%, compared with 20.5% in April). Despite the marked increase in export dynamics, imports still surpassed exports in terms of year-on-year dynamics, as in the previous month.

The trade balance surplus achieved in May was smaller than expected by NBS, mainly as a result of an increase in imports.

3.2.2 PRODUCTION AND REVENUES

The growing global demand continued to influence the year-on-year rise in the industrial production index (IPI), which reached 31% in May (21% in April), corresponding to a month-on-month increase of 3.3%³. The base effect of a slump in production in May 2009 also contributed to this improvement (approximately 4 percentage points).

A significant contribution to the acceleration in year-on-year IPI dynamics came from the electronics sector (85.3% in May; -9.2% in April). In addition to the positive global trends, the strong dynamics of this sector can be attributed to the base effect of low production in May 2009 and to the launch of new production capacities, or to one-off purchases in the given month. Positive contributions also came from the textile industry (16.7%; 3.9%) and metal production (31.1%; 27.1%). The index was negatively influenced by the production of coke and refined oil products (-33.4%; -4.2%), owing to the annual revision of production facilities in May. The June business tendency survey in industry⁴ pointed to the continuing expectations of growth in production and improvement in the current demand indicator. A favourable trend was also signalled by the June indicators of industrial production in Slovakia's main trading partners⁵. Hence, the IPI is expected to maintain its strong year-onyear dynamics over the short-term horizon, but they will moderate gradually owing to a base effect. The June values of the IPI for Slovakia may reflect the unfavourable impact of floods on production in major companies.

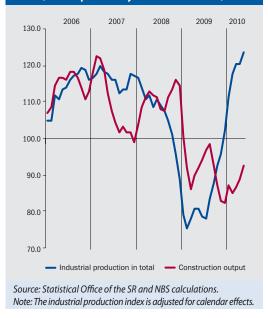

In May, the year-on-year decline in construction deepened to -8.9% (from -1.2% in April), as a result of a month-on-month decrease in production⁶ coupled with a base effect stemming from the dynamics of domestic production (-5.1% yearon-year) and production abroad (-60.1%). The construction of buildings in Slovakia fell only slightly (-3.9%), whereas production in the civil engineering segment declined by 7.9%. The volatility in production can be ascribed to the weather conditions. In the May and June business tendency surveys, climatic conditions were mentioned as a factor hampering production to a greater extent than in previous years. The base effect will influence the dynamics of production positively in the coming months, and will thus contribute to the overall economic recovery. The downturn in residential construction may have a negative effect.

NBS Monthly Bulletin June 2010

Chart 4 Indices of industrial production and construction (3-month moving averages; index, same period a year earlier = 100)

In May 2010, total revenue in the sectors under review recorded an acceleration in the annual rate of growth, compared with April 2010. Revenues increased on a year-on-year basis for the fifth consecutive month, as a result of a gradual revival in production activity stimulated by foreign demand. In industry, the year-on-year growth in revenues accelerated in May, compared with April (mainly as a result of accelerated year-on-year growth in revenues from the manufacturing of computers, electronic and optical products, and metal structures, except for machinery and equipment).

The positive developments, i.e. faster year-onyear growth or slower year-on-year decline in revenues, were recorded in all sectors, except in construction, which reflects the subdued domestic demand.

Retail sales revenues at current prices recorded a slowdown in the year-on-year rate of decline in May 2010, compared with April, as a result of a year-on-year increase in receipts in nonspecialised shops, retail sales of other household goods, and retail sales outside shops, stands and markets, following a decrease in the previous month. The year-on-year rate of growth in revenues accelerated in retail sales of fuels in specialised goods, as a result of a base effect caused by low prices a year earlier.

Table 3 Production and revenues

1) Adjusted for calendar effects (continuously revised time series).

2) Index. same period a year earlier = 100 (constant prices).

3) Index. same period a year earlier = 100 (current prices).

Revenues from motor vehicle sales and maintenance declined year-on-year at a slower pace in May, compared with April 2010.

3.2.3 WAGES, EMPLOYMENT AND UNEMPLOYMENT

In May, the year-on-year dynamics of nominal wages in the sectors under review slowed in comparison with April 2010. The slowdown can be attributed to wage developments

in construction, accommodation, selected market services and industry. At the same time, dynamic nominal wage growth was recorded in food service activities. Wage statistics from the selected sectors for May 2010 indicate that average nominal wage growth in the economy as a whole accelerated in the second quarter of 2010, to 4.1% (from 2.1% in the first quarter of 2010).

Information and communication	86.5	88.2			
Selected market services	95.0	94.7			
Average for the selected sectors	93.8	95.0			
Source: Statistical Office of the SR, NBS calculations.					

Employment in the sectors under review continued to decline in May 2010, albeit at a slower pace (5.0%). This was caused by more moderate falls in employment in all sectors, except in selected market services and accommodation. Average monthly data from the selected sectors for May 2010 indicate that the employment situation improved in the second quarter of 2010, compared with the previous quarter.

According to data from the Centre for Labour, Social Affairs and Family, the total number of unemployed dropped by 8,000 month-onmonth, to 375,200 in May 2010. The rate of registered unemployment reached 12.2% in May, representing a fall of 0.3 of a percentage point compared with the previous month.

3.2.4 THE ECONOMIC SENTIMENT INDICATOR

In June, the economic sentiment indicator rose by 4.3 percentage points compared with May (to 98.6 points), and was 24.9 percentage points higher than in the same period a year earlier. The rise in the indicator was due to positive developments in all components (the indicators of confidence in industry, services, retail trade, construction, and consumer confidence).

The positive trend in confidence in industry and construction was largely attributable to

Source: Centre for Labour, Social Affairs and Family.

an improvement in the assessment of current demand. Confidence in services and retail trade increased mainly as a result of optimistic views on the current trend in the business situation.

Compared with the previous month, consumer confidence increased in three components, i.e.

the expected unemployment situation, expected household savings, and the expected financial situation of households. Consumer confidence weakened in respect of the expected economic development in Slovakia. Compared with the previous month, the consumer confidence indicator rose by 0.4 of a percentage point, corresponding to a year-on-year increase of 17.8 percentage points.

3.3 MONETARY AGGREGATES AND INTEREST RATES

Domestic monetary financial institutions (MFIs) contributed €241 million to euro area M3 growth in May, causing its year-on-year dynamics to weaken by 0.2 of a percentage point, to 0.8%.

Developments in the M3 monetary aggregate were determined mostly by the least liquid deposits. The volume of deposits redeemable on demand grew by €700 million, representing the largest increase since the beginning of 2009. Less liquid deposits, as well as the least liquid ones (marketable instruments), decreased. The positive economic development led to the accumulation of deposits in the two main sectors. The deposits of non-financial corporations grew month-onmonth by €331 million (deposits included in M3 by €330 million) and household deposits increased by €155 million (those included in M3 by €94 million). Non-financial corporate deposits have shown a growing tendency since the beginning of the year. In year-on-year terms, their dynamics have strengthened over the last two months, to almost 5%. In 2009, these deposits experienced a year-on-year decline of 10% to 15%. A similar trend was observed in household deposits. The accumulation of deposits for five months resulted in a positive year-on-year increase (0.5%). This was partially distorted by a base effect stemming from developments a year earlier, following the adoption of the single currency. In the household sector, funds are still accumulated in deposits outside M3, which offer higher interest rates.

Within the scope of M3 counterparts, loans to the general government sector continued to experience large increases. The outstanding amount of MFI receivables and securities from the general government sector increased by €910 million, representing the largest monthon-month change since the beginning of 2009. The outstanding amount of MFI receivables from the private sector increased by €180 million in May. Net foreign assets continued to be accumulated for the third consecutive month. General government deposits increased slightly.

Receivables from the private sector increased in May, while the outstanding amount of securities fell slightly and that of loans increased. The increase in loans (€203 million) took place predominantly in the household sector. The long-term downward trend in loans to other intermediaries continued financial (with a month-on-month decrease of €44 million). The year-on-year dynamics of lending to other financial intermediaries weakened still further, to -32.4%. The slightly positive trend in the real economy was reflected in the non-financial corporate sector, where bank lending ceased to decline (after three months) and loans increased month-on-month by €66 million. Non-financial corporations were granted short-term loans in particular (with a maturity of up to 1 year), which increased to a significant extent. Long-term loans showed the opposite tendency, though their year-on-year decline moderated to -3.4% in May (from -4.5% in April).

The banking sector gave preference to lending to households over lending to non-financial corporations. This resulted in a marked monthon-month increase in the outstanding amount of loans in this sector. In May, the volume of loans granted to households grew by €181 million, representing the largest increase since the end of 2008. This trend has also been indicated in the last two months by the statistics on new loans. A significant increase in loans was also signalled in May. Lending to households for house purchases reached a record level in May, i.e. the highest volume since the introduction of loan statistics (2004). Within the structure of household loans, the outstanding amount of house purchase loans increased by €204 million, causing an acceleration of 1.2 percentage points in the year-on-year rate of growth, to 12%. Consumer loans decreased by €23 million on a month-on-month basis. The year-on-year rate of growth in consumer loans slowed by 3.8 percentage points, to 11.5 %.

Source: NBS calculations based on data from the Slovak Association of Asset Management Companies (SASS) for 2007-2009 and/or SASS data from the Monthly Survey of Net Sales and Assets Managed by Asset Management Companies in Slovakia. 1) Denominated in domestic currency (euro, before 2009 in Slovak koruna) or foreign currency.

2) Calculated by NBS on the basis of SASS data (Weekly Data on Open-End Funds).

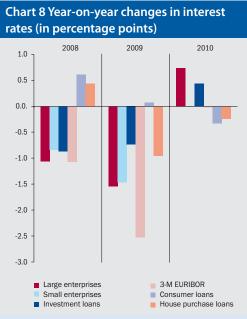

June again saw a reduced inflow of funds into open-end funds (OEF), which fluctuated in negative territory over the first two weeks (between $\in 2.5$ million and $\in 1.7$ million). The monthly net sales of OEFs operating in Slovakia in all categories (denominated in euro and other currencies) reached $\in 4.9$ million⁷. This represented a slight increase in comparison with the previous month, but owing to the persistent lack of interest in conservative investment strategies in Slovakia and in money market funds, they recorded high negative net sales for the second successive month.

In June, the highest positive net sales were achieved by bond funds (\in 14.3 million) and equity funds (\in 8.2 million). Positive net sales were also recorded by mixed funds (\in 6.3 million) and special real estate funds (\in 3.0 million). At the same time, negative monthly net sales were reported by money market funds (\in 23.6 million), the funds of funds (\in 3.0 million) and other/ secured funds (\in 0.3 million).

The key ECB interest rates remained at the level of 1%. The banking sector had enough liquidity from the long-term tender conducted a year earlier. A large part of this liquidity was used for overnight deposits with the ECB. Hence, market rates changed to a minimum extent only. Retail interest rates on loans changed slightly and followed different trends in the individual sectors. Interest rates on deposits fell somewhat in both sectors.

Retail interest rates on loans to non-financial corporations continued to rise in May, in line with the trend that started at the beginning of 2010. Interest levels rose by 0.87 of

a percentage point over this period and the average rate reached approximately 3.6% at the end of May. This trend was connected with banks'increased risk perception during lending to different sectors and with the increased liquidity surcharges of foreign parent banks (the same approach is used for households). The breakdown of loans by purpose shows that interest rates on other loans, house purchase loans and investment loans rose significantly in May. Interest rates on operating loans and current account overdrafts remained unchanged. The prices of loans for large enterprises (loans of over €1 million) rose by

Source: NBS.

Note: For the period until end-2008, the 3-M BRIBOR was used. The interest rate changes were calculated for December of the given year; the figures for 2010 show the changes between May 2010 and December 2009. 7 The different amounts of monthly and cumulative net sales can be explained by the fact that the data of SASS obtained from reaular weekly statistical reports and the data of individual OEF administrators (www.openiazoch.sk) sometimes refer to different periods (SASS makes data releases on Fridays, but some of its members issue data on Thursdays) and the number of mutual funds is recorded differently. The merger of mutual funds and their conversion into euro funds at the end of 2008 caused a significant decrease in the number of mutual funds (from ca. 550 to 460) and an increase in the number of euro funds. In May 2009, BNP Paribas Asset Management (PARVEST funds) became an associate member of SASS. In June, the SASS database was extended to include the funds of ING (I) Invest SICAV. Thus, the total number of open-end funds increased to 570. In August, the majority of PARVEST funds were excluded from the database. They were followed by several Pioneer Investments Austria GmbH funds in September. As a result, the number of funds dropped below 500. In 2010, the number of funds reported by SASS is relatively stable; it ranges from 494 to 502.

NBS

1.1 percentage points, to 3.5 %, in line with the trend that started at the beginning of the year. Rates for small and medium-sized enterprises hovered around the level of 3.8%.

Interest rates on household loans fell slightly for the third successive month. This was partly due to increased lending for house purchases at rates below the level of consumer loan rates. Lending rates for house purchases fell somewhat, especially the rates for other house purchase loans and intermediate loans. Interest rates on mortgage loans, other house purchase loans and intermediate loans were at approximately the same level (5.3%). The prices of loans for consumption (consumer loans and other loans) rose somewhat.

Interest rates on deposits from non-financial corporations and households fell slightly in May. For non-financial corporations, long-term deposit rates (for deposits with an agreed maturity of over 1 year) were reduced. For households, interest rates on deposits with an agreed maturity of up to 1 year fell most significantly. Interest rates on other types of deposits remained stagnant. Deposit rates remained virtually unchanged, except for fixed-term deposit rates with longer maturities, whose volatility can be attributed to the marketing activities of banks.

Source: ECB.

1) On 22 December 1998 the ECB announced that, as an exceptional measure between 4 and 21 January 1999, a narrow corridor of 50 basis points would be applied between the interest rates for the marginal lending facility and the deposit facility, aimed at facilitating the transition to the new regime by market participants.

2) On 8 June 2000 the ECB announced that, starting from the operation to be settled on 28 June 2000, the main refinancing operations of the Eurosystem would be conducted as variable rate tenders. The minimum bid rate refers to the minimum interest rate at which counterparties may place their bids.

3) The change of 18 September 2001 was effective for the main refinancing operation on that same day.

4) As of 9 October 2008 the ECB reduced the standing facilities corridor from 200 basis points to 100 basis points around the interest rate on the main refinancing operations.

5) On 8 October 2008 the ECB announced that, starting from the operation to be settled on 15 October, the weekly main refinancing operations would be carried out through a fixed-rate tender procedure with full allotment at the interest rate on the main refinancing operations. This change overrode the previous decision (made on the same day) to cut by 50 basis points the minimum bid rate on the main refinancing operations conducted as variable rate tenders.

Notes:

1) Data before 2009 (before Slovakia's entry into the euro area) refer to statistical records of Slovak monetary aggregates converted from the Slovak koruna to the euro (1 EUR = 30.1260 SKK). 2) Data from January 2009 onwards (after Slovakia's entry into the euro area as at 1 January 2009) refer to Slovakia's contributions to EMU monetary aggregates. The volume of currency, based on the set ECB key corresponds to the volume of banknotes based on the NBS share in the total issue of banknotes in the euro area.

Note: As of May 2010, data from sentiment surveys (except for the consumer confidence indicator) are classified according to economic activities (SK NACE Rev. 2). Up to May 2010, data are classified according to NACE Rev. 1.

1) Difference between the percentages of respondents giving positive and negative replies.

2) The economic sentiment indicator is composed of the industrial, services, consumer, construction, and retail trade confidence indicators; the indistrial confidence indicator has a weight of 40%, the services confidence indicator a weight of 30%, the consumer confidence indicator a weight of 20%, and construction and retail trade indicators a weight of 5% each. Values of the economic sentiment indicator above (below) 100 indicate above – average (below – average) economic sentiment, calculad for the period 1993 to 2009.

3) Data are collected in January, April, July and October each year. The quarterly figures shown are averages of two succesive surveys. Annual data are derived from quarterly averages. 4) The confidence indicators are calculated as simple averages of the components shown; the assessments of stocks (columns 4 and 17) and unemployment (column 10) are used with inverted signs for the calculation of confidence indicators.
