# 1 SUMMARY

The year-on-year rate of euro area inflation, as measured by the Harmonised Index of Consumer Prices, reached 1.8% in September, compared with 1.6% in August. The exchange rate of the euro against the US dollar appreciated during September. At its October meeting, the ECB's Governing Council decided to leave the key ECB interest rates unchanged, with the rate for the main refinancing operations standing at 1.00%, the marginal lending rate at 1.75% and the deposit rate at 0.25%.

Hungary's annual HICP inflation rate remained broadly unchanged, at 3.7% in September. Price inflation in the Czech Republic and Poland accelerated in comparison with the same period a year earlier, to 1.8% and 2.5% respectively. The Czech koruna, Polish zloty and Hungarian forint continued to appreciate vis-à-vis the euro. Key interest rates in the Czech Republic, Hungary and Poland remained unchanged in September.

Compared with the previous month, Slovakia's annual HICP inflation rate remained unchanged in September, at the level of 1.1%. The year-on-year decline in energy prices moderated during the month, owing to a slowdown in the year-on-year dynamics of fuel prices. At the same time, somewhat stronger year-on-year dynamics were shown by the prices of foodstuffs, services, and non-energy industrial goods. The prices of manufacturing and mining/quarrying products increased, while water and sewage rates showed weaker dynamics and the year-on-year decline in energy prices slowed. The year-on-year dynamics of agricultural products prices markedly increased in August, compared with the previous month, while construction work prices remained unchanged on a year-on-year basis.

The current account balance achieved in August was worse than the balance for the previous month. The higher current account deficit was caused by increased trade and income balance deficits. The overall current account balance was positively influenced by improvements in the services and current transfers balances.

The industrial production index showed somewhat weaker year-on-year dynamics in August, owing to a base effect. Despite the slowdown in dynamics, production followed a growing trend in most of the sectors. The year-on-year decline in construction moderated in August, compared with the previous month. Revenues showed stronger growth in August in year-on-year terms, mainly as a result of positive developments in revenues in wholesale trade, construction, and motor vehicle sales. The overall economic sentiment indicator worsened in September, compared with the previous month. The deterioration was caused by a fall in confidence in industry, services, and in consumer confidence. Compared with the previous month, the confidence indicator rose in construction and, to a lesser extent, in retail trade.

Average nominal and real wages showed stronger year-on-year dynamics in August than in the previous month. Accelerated growth was recorded in almost all sectors, except in transport and storage, wholesale trade, and in restaurant and catering services. The year-on-year decline in employment in the sectors under review continued to moderate in August. Slower declines were recorded in almost all sectors, except in selected market services. The rate of registered unemployment fell somewhat in comparison with the previous month, to 12.2% in August.

The sectoral breakdown of deposits shows that non-financial corporate deposits, as well as household deposits, continued to show positive year-on-year dynamics in August. Both sectors recorded an increase in demand deposits in particular. In the non-financial corporate sector, deposits with an agreed maturity of up to 2 years increased, too. The increase in demand deposits was the main factor shaping the M3 monetary aggregate in August. The amount of loans to non-financial corporations increased in August, compared with the previous month, mainly in connection with the strengthening economic activity and the improving financial situation of non-financial corporations. Lending to other financial intermediaries declined considerably. Loans to households recorded a modest year-on-year increase in August. Lending

to households was influenced mostly by loans for house purchases. Retail interest rates on loans to non-financial corporations were at a standstill in August. Lending rates for households remained virtually unchanged, only consumer loans

recorded a certain rise in interest levels. In lending to sole traders, a marked increase was recorded in the price of operating loans. Retail deposit rates remained broadly unchanged in both sectors in August.

## 2 THE EXTERNAL ECONOMIC ENVIRONMENT<sup>1</sup>

### 2.1 THE EURO AREA

The year-on-year rate of euro area inflation, as measured by the Harmonised Index of Consumer Prices (HICP), accelerated by 0.2 of a percentage point compared with August, to 1.8% in September. This acceleration was caused mainly by a steeper rise in energy prices. In year-on-year terms, price levels fell only in Ireland (by 1.0%). The steepest price increases were reported from Greece (5.7%), Cyprus (3.6%), and Belgium (2.9%). According to the classification of individual consumption by purpose (COICOP), the year-on-year rise in euro area prices was caused by price increases in the following categories: transport (4.1%), alcohol and tobacco (3.2%), and household goods (2.9%). At the same time, year-on-year price falls in the euro area were recorded in post and telecommunications (-0.9%), and in recreation and culture (-0.2%). In the same period a year earlier, inflation had been in negative territory (-0.3%).

The exchange rate of the euro against the US dollar strengthened in September, as a result

of improving financial market sentiment. This development was caused by market sentiment, rather than by the values of specific indicators. In September, the euro appreciated in relation to the dollar by 7.6%. Compared with the beginning of the year, the single European currency weakened by 5.1% vis-à-vis the dollar (compared with the same period a year earlier, the euro depreciated by 6.8%).

The ECB's Governing Council decided at its meeting on 7 October 2010 to leave the key ECB interest rates unchanged. Thus, the rates for the main refinancing operations, the marginal lending facility and the deposit facility remained at 1.00%, 1.75 % and 0.25 % respectively.

### 2.2 DEVELOPMENTS IN THE CZECH REPUBLIC, HUNGARY AND POLAND

In the Czech Republic, the annual rate of HICP inflation rose by 0.3 of a percentage point in September (to 1.8%), mainly as a result of a rise in services prices. In Poland, the price increase

Chart 1 USD/EUR exchange rate

Chart 2 Exchange rate indices of the V4 currencies vis-à-vis the euro (30 June 2008=100)

Sources: Eurostat, NBS calculations.  
Note: A fall in value denotes appreciation.

<sup>1</sup> The chapter on international economic developments includes a tabular / graphical overview, which is available in the Statistics annex, External environment.

accelerated by 0.6 of a percentage point (to 2.5%), owing to a rise in energy and food prices. Hungary's inflation rate rose by only 0.1 of a percentage point, to 3.7% in September.

The currencies of the neighbouring countries appreciated during the first ten days of September. At the end of this period, the appreciating trend came to a halt as a consequence of worsened investor sentiment. Subsequently, the Hungarian forint continued to appreciate, probably as a result of the government's decision to reduce the country's public deficit below 3% next year and of General Motors' plan to expand production at its Hungarian plant. The Czech koruna recorded a marked appreciation in the middle of

the month, partly supported by the improving fiscal outlook, then, after a certain correction, continued to appreciate at a moderate pace. The Polish zloty appreciated somewhat at the beginning of the month, then, after the country's public deficit had been officially released, started to depreciate in mid-September. From the last day of August to end-September, the Polish zloty appreciated by 0.7%, the Czech koruna by 1.0%, and the Hungarian forint by 4.2%.

Key interest rates in the Czech Republic, Hungary and Poland remained unchanged in September. Narodowy Bank Polski left its base rate at 3.5%, Česká národní banka at 0.75%, and Magyar Nemzeti Bank at 5.25%.

## 3 ECONOMIC DEVELOPMENTS IN SLOVAKIA

### 3.1 PRICE DEVELOPMENTS

#### 3.1.1 CONSUMER PRICES

Consumer prices, as measured by Harmonised Index of Consumer Prices, remained unchanged in September on a month-on-month basis, with goods prices falling by 0.1% and services prices rising by 0.2%. The HICP inflation rate was lower than expected by NBS, mainly as a result of stagnation in food prices and a slower than expected rise in the prices of services and non-energy industrial goods.

The 12-month inflation rate remained unchanged in comparison with the previous month, at 1.1%. This was the result of conflicting developments in the individual components of price inflation, i.e. a slowdown in energy price dynamics and a slight acceleration in the year-on-year dynamics of food, services, and non-energy industrial goods prices.

September, like the previous month, saw different trends in non-energy industrial goods prices: non-durable and semi-durable goods prices showed accelerating year-on-year dynamics, which were partly offset by a slightly accelerated year-on-year decline in durable goods prices. In energy prices, fuel prices showed weakening

year-on-year dynamics. In food prices, the year-on-year rate of increase in processed food prices accelerated, while unprocessed food prices recorded the same year-on-year dynamics as in the previous month. In processed food prices, the prices of milk, dairy products, eggs, fats and wine rose year-on-year at a faster pace, while the price of bread recorded a slower year-on-year decline. Unprocessed food prices were influenced by a slowdown in the dynamics of vegetable and fish prices. At the same time, the rise in fruit prices accelerated, while the decline in meat prices slowed. Prices for services rose at a slightly accelerated pace in year-on-year terms, as a result of price increases in transport, personal and recreational services.

From October 2009 to September 2010, the average 12-month inflation rate reached 0.4%, representing a rise of 0.1 of a percentage point compared with the previous month.

In the coming month, HICP inflation is expected to accelerate in year-on-year terms, owing to an increase in the year-on-year dynamics of prices for almost all components of the basic structure of price inflation. The most significant contributions are expected from food and services prices.

**Table 1 Producer price developments in August 2010 (%)**

	Month-on-month changes		Year-on-year changes			
	July 2010	August 2010	August 2009	July 2010	August 2010	Average since begin. of 2010
Industrial producer prices (for the domestic market)	0.5	0.2	-4.6	-0.7	-0.4	-3.7
– prices of manufacturing products	0.1	0.3	-7.3	1.0	1.4	-0.6
– prices of mining/quarrying products	0.8	1.8	-9.8	7.8	12.8	-2.3
– energy prices	0.8	0.0	-1.0	-3.6	-3.4	-7.8
– water and sewerage charges	0.1	-0.1	4.2	7.3	6.8	6.1
Industrial producer prices (for export)	0.9	-0.1	-11.5	4.4	4.0	1.8
– prices of manufacturing products	0.8	-0.1	-10.7	4.4	4.0	2.1
Construction prices	-0.1	0.2	1.6	0.5	0.5	0.9
Building material prices	-0.3	0.4	-8.7	-2.2	-1.3	-5.6
Agricultural prices	-	-	-32.8	12.8	20.2	3.4
– prices of vegetable products	-	-	-35.5	20.3	27.0	11.2
– prices of animal products	-	-	-27.0	4.7	7.5	-1.2

Source: Statistical Office of the SR.

The consumer price index (CPI) stagnated on a month-on-month basis in September, while regulated prices rose by 0.3% and core inflation remained unchanged (0.0%). The 12-month rate of consumer-price inflation stood at 1.1%, compared with 1.0% in August 2010.

### 3.1.2 PRODUCER PRICES

Industrial producer prices for the domestic market increased by 0.2% month-on-month in August 2010, representing a slowdown of 0.3 of a percentage point in the year-on-year pace of decline (to -0.4%).

The steeper year-on-year rise in manufacturing products prices in Slovakia in August 2010, compared with the previous month, was caused by a slight acceleration in the rate of increase in refined oil products prices (by 2.8 percentage points, to 28.6%), metal and metal products prices (by 1.1 percentage points, to 7.0%), and wood and paper goods prices (by 0.6 of a percentage point, to 7.0%). Slower decline than a month earlier was recorded in the prices of foodstuffs (by 1.1 percentage points, to -1.4%), rubber and plastic products (by 1.4 percentage points, to -1.7%), and electrical appliances (by 1.4 percentage points, to -1.3%). The prices of transport vehicles fell in year-on-year terms more significantly than in the previous month (by 2.9 percentage points, to -3.3%).

The year-on-year decline in energy prices moderated in August 2010, compared with the previous month, mainly as a result of a slower decline in electricity prices (by 0.2 of a percentage point, to -3.4%). In the same period, the year-on-year increase in prices for gas production and the transport of gaseous fuels via pipelines slowed (by 0.7 of a percentage point, to 17.9%) and the year-on-year decline in prices for steam and air-conditioning supply deepened somewhat (by 0.1 of a percentage point, to -3.8%).

The prices of agricultural products rose by 20.2% year-on-year in August 2010, compared with the previous month, as a result of year-on-year increases in both plant products prices (27.0%, caused by a steep rise in cereal and potato prices) and animal products prices (7.5%).

The slightly rising global oil prices, the slowing decline in energy prices, and signs of increases in numerous food commodity prices in September created conditions for the overall industrial producer price index to approach the level recorded a year earlier.

According to the latest agrarian market news, the purchase prices of cereals in Slovakia are currently subject to considerable fluctuation, owing to developments in the common European market. Price levels are expected to stabilise only after this season's crops in the main cereal growing countries have been summarised. The purchase prices of cereals and oilseed rape are expected to rise at a slower pace in the coming months. In animal production, the purchase price of slaughtered cattle is expected to stabilise around last year's level and that of slaughtered pigs to fall somewhat. The average purchase price of milk is expected to rise slightly. On the whole, agricultural prices are likely to increase year-on-year in September at a more moderate pace than in August 2010.

**Chart 3 Contributions to the year-on-year PPI changes by component**

Source: Statistical Office of the SR.

## 3.2 THE REAL ECONOMY AND THE LABOUR MARKET

### 3.2.1 TRADE BALANCE

The current account balance achieved in August was worse than the balance for the previous month. The current account deficit increased on a month-on-month basis as a result of

**Table 2 Balance of payments current account (EUR millions)**

	July	August	
	2010	2010	2009
Trade balance	-87.8	-200.1	216.9
Exports	3,785.4	3,755.4	3,131.0
Imports	3,873.2	3,955.5	2,914.1
Services balance	-96.6	-23.0	-9.9
Income balance	-32.9	-108.3	-129.1
of which: income from investment	-129.9	-205.3	-213.9
of which: reinvested earnings	-202.1	-157.1	-249.6
Current transfers balance	-105.5	-95.1	-62.3
Current account in total	-322.8	-426.5	15.6

Sources: NBS and the Statistical Office of the SR.

increases in the trade and income balances (caused mainly by lower interest income from portfolio investments). At the same time, the overall increase in the current account deficit was moderated by an improvement in the services balance (a decrease in payments) and, to a lesser extent, in the current transfers balance.

Export dynamics continued to weaken in August, by 3.8 percentage points month-on-month, to 19.9%. At the same time, import dynamics increased for the second consecutive month, to 35.7% (from 27.8% in July). Thus, the slowdown in export dynamics, accompanied by an acceleration in import dynamics, again resulted in a negative trade balance.

The trade balance recorded in August was worse than expected by NBS, mainly as a result of an increase in imports.

### 3.2.2 PRODUCTION AND REVENUES

In August, the industrial production index (IPI) showed somewhat weaker dynamics in year-on-year terms (16.3%, compared with 16.8% in July), owing to a base effect. In month-on-month terms, however, the index rose by 2.3%. Despite the slowdown, production followed a growing trend in most of the sectors. A marked slowdown was recorded in manufacturing production, the dynamics of which decreased to 14.7% (from 21.5%). This was partly offset by an increase in

the dynamics of energy supply, to 27.4% (from 0.3%).

Within the manufacturing industry, the year-on-year dynamics of the IPI were positively influenced by the production of coke and refined oil products (2.8% in August; -10.7% in July). At the same time, the index was adversely affected by production in the electronics sector (14.5%; 57.5%), where, however, around a half of the slowdown was ascribable to a base effect. The increasing material supplies in this sector indicate that production is likely to continue growing in the coming months. The dynamics of transport vehicle production also weakened (24.2%; 48.1%) as a result of a base effect. The September business tendency survey<sup>2</sup> recorded no marked changes, while the current demand indicators improved somewhat, but the production growth expectations were somewhat weaker than in the previous months. Production still showed signs of a return to moderate growth in line with the fading stimulus measures, or under the influence of fiscal consolidation.

In construction, the year-on-year decline in production again moderated in August, to -0.6% (from -3.3% in July), owing to a further month-on-month increase in production<sup>3</sup>. The sector's output was mostly influenced by domestic production, which grew by 0.1% (-2.1%)<sup>4</sup>. A gradual recovery in 2010 has been observed in building construction and,

<sup>2</sup> Statistical Office of the SR, Business Tendency Surveys, September 2010.

<sup>3</sup> By 2.4%. Source: Statistical Office of the SR, Construction sector output in August 2010.

<sup>4</sup> Production abroad fell by 23.7% year-on-year in August (compared with 35.1% in July).

**Chart 4 Indices of industrial production and construction (3-month moving averages; index, same period a year earlier = 100)**

Source: Statistical Office of the SR and NBS calculations.

Note: The industrial production index is adjusted for calendar effects.

business tendency survey again recorded negative sentiment in this sector. Many of the respondents mentioned insufficient demand as a restricting factor. They expect a further fall in construction activity. The base effect of low production from the end of 2009, however, may cause the sector's output to return to positive growth dynamics in the period from September to December 2010.

In August 2010, total revenue in the sectors under review recorded an acceleration in the year-on-year rate of growth, compared with July 2010. This was caused by positive developments in revenues in wholesale trade, construction, selected market services, and motor vehicle sales. Industry recorded a slowdown in the 12-month rate of revenue growth. This slowdown was caused mainly by slower revenue growth in transport vehicle production and in the manufacture of computers, electronic and optical products. Slower revenue growth in year-on-year terms was also recorded in transport.

in the last few months, in civil engineering construction. This, however, may be only a temporary development. The September

Retail sales revenues at current prices recorded a modest year-on-year increase in August,

**Table 3 Production and revenues**

Statistical classification of economic activities (SK NACE Rev. 2)	EUR millions, current prices	Indices			
	August 2010	August 2009	Jan. – Dec. 2009	July 2010	August 2010
Industrial production index <sup>1), 2)</sup>	-	91.3	86.3	116.8	116.3
Production in construction <sup>2)</sup>	565.3	100.1	88.7	96.7	99.4
Revenues <sup>3)</sup>					
Industry in total	5,190.8	82.7	78.9	117.5	114.4
Construction	875.5	95.5	88.3	93.2	99.5
Wholesale trade, excluding motor vehicles	1,977.8	70.5	73.2	99.2	106.9
Retail trade, excluding motor vehicles	1,491.8	87.5	88.1	100.4	100.5
Sale and maintenance of vehicles	303.1	77.2	76.9	86.3	107.3
Accommodation and food service activities	95.6	75.0	77.2	96.6	96.6

Selected market services	688.8	89.9	96.7	109.7	111.8
Information and communication	335.3	99.8	103.3	91.0	92.1
Revenues from own-output and sales in selected sectors	11,420.3	82.7	81.4	106.6	108.0

Source: Statistical Office of the SR and NBS calculations.

1) Adjusted for calendar effects (the data in the time series are continuously revised).

2) Index, same period a year earlier = 100 (constant prices).

3) Index, same period a year earlier = 100 (current prices).

causing only a negligible acceleration in the rate of growth compared with July 2010. A slowdown in the year-on-year growth rate of retail sales was recorded in non-specialised shops. Compared with July, the year-on-year decline in receipts slowed in retail trade in household goods and other goods in specialised shops.

Revenues from motor vehicle sales and maintenance again showed positive year-on-year dynamics in August, after recording a sharp year-on-year decline in July 2010. The August improvement was attributable to the low level of comparison, i.e. very low revenues recorded in the same period a year earlier. In September, the year-on-year rate of revenue growth is expected to be close to zero or to be slightly negative.

### 3.2.3 WAGES, EMPLOYMENT AND UNEMPLOYMENT

In August, the year-on-year dynamics of nominal wages in the sectors under review accelerated in comparison with July 2010. Nominal wage growth accelerated in almost all sectors, except in transport and storage, wholesale trade, and in restaurant and catering services, where nominal wages grew at a slower pace

than a month earlier. Wage statistics from the selected sectors for August 2010 indicate that average nominal wage growth in the economy as a whole accelerated in the third quarter of 2010, to 4.5% (from 3.6% in the second quarter of 2010).

The decline in employment in the sectors under review continued to moderate in August, to 2.2%. This was the result of smaller falls in employment levels in almost all sectors, except in selected market services. Average monthly data from the selected sectors for August 2010 indicate that the employment situation improved in the third quarter of 2010, compared with the previous quarter.

According to data from the Centre for Labour, Social Affairs and Family, the total number of unemployed dropped month-on-month by 4,900, to 370,700 in August 2010. The rate of registered unemployment reached 12.2% in August, representing a fall of 0.1 of a percentage point compared with the previous month. The inflow of job seekers decreased considerably, to the lowest level recorded since the beginning of 2009.

**Table 4 Wage developments in selected sectors (index, same period a year earlier = 100)**

	Average monthly nominal wage		Average monthly real wage <sup>1)</sup>

### 3.2.4 THE ECONOMIC SENTIMENT INDICATOR

In September, the economic sentiment indicator fell by 2.4 percentage points compared with August (to 95.5 points), but was still 14.3 percentage points higher than in the same period a year earlier. The indicator was negatively influenced by a fall in confidence in industry, services, and in consumer confidence. Compared with the previous month, the confidence indicator

for construction improved in September, while that for retail trade remained broadly at the level of the previous month.

Confidence in industry weakened as a result of waning optimism about the future trend in industrial production. Confidence in services weakened to some extent, owing to the worsening expectations regarding the current business

Chart 7 Economic sentiment indicator

situation. The low confidence in construction was slightly improved by the growing number of employees in the following months. The indicator of confidence in retail trade worsened somewhat, owing to the increasing supplies of goods.

Compared with the previous month, consumer confidence weakened in three components, i.e. the expected financial situation of households, expected household savings, and expected economic developments in Slovakia. Consumer confidence improved in respect of the expected unemployment situation. Compared with the previous month, the consumer confidence indicator fell by 1.3 percentage points, while rising in year-on-year terms by 3.6 percentage points.

### 3.3 MONETARY AGGREGATES AND INTEREST RATES

Domestic monetary financial institutions (MFIs) contributed €146 million to euro area M3 growth in August, causing its year-on-year dynamics to strengthen by 0.5 of a percentage points, to 2.9%.

The growth in the M3 monetary aggregate was caused by an increase in the most liquid deposits (M1). The opposite trend was recorded in less liquid deposits (M2-M1) and in marketable instruments (M3-M2), the amounts of which decreased somewhat. This development was reflected in their year-on-year dynamics, too. The year-on-year growth in M1 accelerated by 3 percentage points, to 8.5%. Together with the dynamically growing securities that belong to the least liquid deposits (M3-M2), M1 growth determines the course of the M3 aggregate. The decline in M2-M1 deepened by 1.9 percentage points, to -16%. Within the scope of M1, demand deposits increased to a significant extent, while currency in circulation decreased slightly. Deposits with the shortest maturities grew mainly in the non-financial corporate sector. This was probably connected with the improved position in non-financial corporations, whose increased output and revenues were reflected in their growing deposits. In the non-financial corporate sector, deposits with an agreed maturity of up to 2 years increased, too. This was connected with the rise in deposit rates in this category. The year-on-year dynamics of non-financial corporate deposits included in M3 remained positive for the fifth consecutive month. Households shifted their funds from deposits with an agreed maturity of up to 2 years into deposits with the shortest maturities, long-term deposits outside M3, and into the shares/units of investment funds, other than money market funds. The year-on-year decline in household deposits included in M3 has slowed over the last three months, as a result of a smaller outflow of funds into higher-interest-bearing deposits outside M3. Overall, household deposits have recorded slightly positive year-on-year increases in the last five months.

Within the scope of M3 counterparts, the outstanding amount of MFI receivables from the private sector continued to increase in August. This caused a further acceleration in their year-on-year dynamics. The outstanding amount of MFI receivables from the private sector increased by €158 million, owing to an increase in loans and a further decrease in securities.

Receivables from the private sector followed the trend from the previous months. The outstanding amount of securities decreased by €31 million,

while loans increased by €189 million. Despite the relatively large month-on-month increase, the year-on-year growth in loans slowed by 0.2 of a percentage point, to 2.1%. Thus, the slightly growing trend from the previous four months came to a halt.

Bank lending to non-financial corporations increased by €122 million in August. The most significant increase took place in long-term loans (over 5 years). This positive trend was connected with the expanding economic activity and improving financial position of non-financial corporations. Short-term loans also increased somewhat. The year-on-year dynamics of lending stagnated at the level of the previous month (-2.2%). The slightly growing trend in new loans to non-financial corporations is likely to cause an increase in the outstanding amount of loans in the future. After growing for two consecutive months, loans to other financial intermediaries recorded a marked decrease in August (€86 million). This caused their year-on-year decline to deepen by 4.3 percentage points, to -32.2%. In the household sector, the relatively steep monthly increases in loans continued in August (with an increase of €153 million). The year-on-year growth in lending to households accelerated by 0.2 of a percentage point, to 10.9% in August. Loans to households were influenced mostly by house purchase loans, which increased by €125 million in August. Their year-on-year growth accelerated somewhat, from 10.7% in February 2010 to 12.5% in August. Demand for house purchase loans was stimulated by the lower prices and better lending conditions in comparison with the previous years. Real economic development improved and the labour market situation stabilised, too. Loans for

consumption also increased slightly, but their year-on-year growth remained broadly at the level of the previous month (10.8% for consumer loans and 5.0% for other loans).

After more than a year, there was an outflow of funds from open-end funds (OEFs) in September. The first two weeks saw some inflows (€3.0 million and €8.4 million), which were more than offset by outflows in the following two weeks (€0.4 million and €17.0 million). The monthly negative net sales of OEFs of all categories operating in Slovakia (euro and foreign-currency funds) totalled €11.0 million.<sup>5</sup> The change in conservative investment in money market funds in Slovakia resulted in negative monthly net sales for the fifth consecutive month. Before April, most investments had been attracted by money market funds and mixed funds, but later, as from June, the largest positive net sales were recorded in bond funds.

The largest positive net sales in September were again recorded by bond funds (€15.2 million), special real estate funds (€3.4 million), and mixed funds (€1.4 million). Negative monthly net sales were reported by money market funds (€26.0 million), other/secured funds (€2.6 million), the funds of funds (€1.9 million), and equity funds (€0.5 million).

The key ECB interest rates remained unchanged in August, at the level of 1% (since May 2009). The ECB continued to conduct both long-term and short-term liquidity-providing operations to ensure the smooth functioning of the interbank market. This contributed to the stagnation of EURIBOR rates. Thus, the gradually rising trend from the previous three months came to a halt.

<sup>5</sup> The different amounts of monthly and cumulative net sales can be explained by the fact that the data of SASS obtained from regular weekly statistical reports and the data of individual OEF administrators ([www.openiazoch.sk](http://www.openiazoch.sk)) sometimes refer to different periods (SASS makes data releases on Fridays, but some of its members issue data on Thursdays) and the number of mutual funds is recorded differently. The merger of investment funds and their conversion into euro funds at the end of 2008 caused a significant decrease in the number of investment funds (from ca. 550 to 460) and an increase in the number of euro funds. In May 2009, BNP Paribas Asset Management (PARVEST funds) became an associate member of SASS. In June, the SASS database was extended to include the funds of ING (L) Invest SICAV. Thus, the total number of open-end funds increased to 570. In August, the majority of PARVEST funds were excluded from the database. They were followed by several Pioneer Investments Austria GmbH funds in September. As a result, the number of funds dropped below 500. In 2010, the number of funds reported by SASS is relatively stable; it ranges from 494 to 506.

**Table 6 Monthly net sales of open-end funds<sup>1)</sup> in Slovakia (EUR millions)**

Source: NBS calculations based on data from the Slovak Association of Asset Management Companies (SASS) for 2007- October 2008, from the Weekly Data on Open-End Funds, and/or SASS data for November 2008 - 2010 from the Monthly Survey of Net Sales and Assets Managed by Asset Management Companies in Slovakia.

1) Denominated in domestic currency (euro, before 2009 in Slovak koruna) or foreign currency.

2) Calculated by NBS for the given month on the basis of SASS data (Weekly Data on Open-End Funds).

Retail interest rates on loans to non-financial corporations were stagnant in August, at the level of 3.6%. Lending rates rose considerably for investment loans and house purchase loans. The opposite trend was recorded in the prices of other loans, which fell slightly. Interest rates on current account overdrafts also fell somewhat. Interest rates on operating loans remained unchanged for the third consecutive month. The breakdown of loans by size indicates that lending rates for small and medium-sized enterprises showed a slightly rising trend, while those for large corporations were at a standstill.

Lending rates for households recorded no significant changes, but they rose slightly for all types of loans. They probably reacted to the slight rise in market rates with a certain time lag. Interest rates on consumer loans rose by 0.17 of

a percentage point (this was the most significant change). Within the scope of house purchase loans, interest rates on mortgage loans and other loans for house purchases rose slightly. In lending to sole traders, a marked rise was recorded in the price of operating loans; this led to low demand for such loans. At the same time, interest rates on investment loans fell.

Interest rates on deposits remained broadly unchanged for all sectors, but the rates for the individual maturities varied. The price of short-term deposits remained unchanged. For non-financial corporations, interest rates on deposits with a maturity of over 1 year and on structured deposits rose considerably. For households, interest rates on deposits with a maturity of up to 1 year and on structured deposits increased, too. Interest rates on other types of deposits remained unchanged.

Source: ECB.

1) On 22 December 1998 the ECB announced that, as an exceptional measure between 4 and 21 January 1999, a narrow corridor of 50 basis points would be applied between the interest rates for the marginal lending facility and the deposit facility, aimed at facilitating the transition to the new regime by market participants.

2) On 8 June 2000 the ECB announced that, starting from the operation to be settled on 28 June 2000, the main refinancing operations of the Eurosystem would be conducted as variable rate tenders. The minimum bid rate refers to the minimum interest rate at which counterparties may place their bids.

3) The change of 18 September 2001 was effective for the main refinancing operation on that same day.

4) As of 9 October 2008 the ECB reduced the standing facilities corridor from 200 basis points to 100 basis points around the interest rate on the main refinancing operations.

5) On 8 October 2008 the ECB announced that, starting from the operation to be settled on 15 October, the weekly main refinancing operations would be carried out through a fixed-rate tender procedure with full allotment at the interest rate on the main refinancing operations. This change overrode the previous decision (made on the same day) to cut by 50 basis points the minimum bid rate on the main refinancing operations conducted as variable rate tenders.

Notes:

- 1) Data before 2009 (before Slovakia's entry into the euro area) refer to statistical records of Slovak monetary aggregates converted from the Slovak koruna to the euro (1 EUR = 30.1260 SKK).  
2) Data from January 2009 onwards (after Slovakia's entry into the euro area as at 1 January 2009) refer to Slovakia's contributions to EMU monetary aggregates. The volume of currency, based on the set ECB key corresponds to the volume of banknotes based on the NBS share in the total issue of banknotes in the euro area.

Note: As of May 2010, data from sentiment surveys (except for the consumer confidence indicator) are classified according to economic activities (SK NACE Rev. 2). Up to May 2010, data are classified according to NACE Rev. 1.

1) Difference between the percentages of respondents giving positive and negative replies.

2) The economic sentiment indicator is composed of the industrial, services, consumer, construction, and retail trade confidence indicators; the industrial confidence indicator has a weight of 40%, the services confidence indicator a weight of 30%, the consumer confidence indicator a weight of 20%, and construction and retail trade indicators a weight of 5% each. Values of the economic sentiment indicator above (below) 100 indicate above – average (below – average) economic sentiment, calculated for the period 1993 to 2009.

3) Data are collected in January, April, July and October each year. The quarterly figures shown are averages of two successive surveys. Annual data are derived from quarterly averages.

4) The confidence indicators are calculated as simple averages of the components shown; the assessments of stocks (columns 4 and 17) and unemployment (column 10) are used with inverted signs for the calculation of confidence indicators.
