Foreword

The *Statistical Bulletin – Monetary and Financial Statistics* is a quarterly publication issued by the Statistics Department of Národná banka Slovenska.

The present issue is based on data as at the end of June 2026. The publication is based on statistical data which are the main source for compilation of the European Central Bank's euro area statistics, of the International Monetary Fund's and Eurostat's statistics, and for monetary and financial stability analyses at the national level.

Main goal of the Bulletin is to improve the presentation of monthly and quarterly data published on the website of Národná banka Slovenska and to provide users with more comprehensive data on monetary and financial statistics. The Bulletin presents the available aggregated data compiled according to the ECB's methodology and detailed national data presented in the form of tables, charts and commentaries.

The information published in the Bulletin comprises data that are processed and reported by domestic financial institutions, specifically by banks and branches of foreign banks, investment funds, leasing companies, factoring companies, and consumer credit companies. The last chapter is summarising the methodological notes to the individual areas of statistics under analysis.

The Bulletin is available in electronic form on the NBS website (www.nbs.sk), in PDF format.

We hope that by processing the data in this way, and with the help of feedback from our readers and data users, we will succeed in providing an overview that is quick and easy to use. Any remarks or suggestions regarding the quality of this publication and how it may be improved can be sent to martin.motyka@nbs.sk.

Editors of the Monetary
and Financial Statistics Section

1 Structure of the financial market in Slovakia

1.1 Overview of participants

At the end of June 2026, there were 23 monetary financial institutions operating in the Slovak banking sector (S.121+S.122+S.123). In the Deposit-Taking Corporations Sector (S.122), besides the central bank, there were 22 entities, comprising 8 banks, 12 branches of foreign banks and 2 home savings banks (building societies).

The Investment Funds Sector (S.124) added six entities in the quarter under review. The number of real estate funds increased by four, while the numbers of equity and mixed funds each rose by one entity. Year on year, the number of funds increased by 36 entities, which reflects the fact that NBS began including investment funds with legal personality in its aggregate statistics in December 2025.

No money market funds have been recorded in Slovakia since 2018.

In the other Financial Intermediaries Sector (S.125), the number of active entities increased by 74 in a quarter-on-quarter comparison and 123 in year-on-year terms. This development is linked not only to the establishment of new entities but also to changes in sectoral classification.

In the Financial Auxiliaries Sector (S.126), the total number of active entities was unchanged compared to the previous quarter of 2026. The numbers of individual entities falling under Sector S.126 were likewise unchanged.

In the Insurance Corporations and Pension Funds Sectors (S.128+S.129), no changes occurred compared with the previous quarter of 2026 in either the total number or individual entities.

1.2 Employees in the banking sector

The total number of employees in the Slovak banking sector at the end of the quarter under review stood at 17,575. This represents a quarter-on-quarter decrease of 115. In year-on-year terms, it represents a decrease of 257 employees.

The central bank reduced its headcount by 13 compared with the previous quarter of 2026, bringing its total to 1,141 employees. Compared with a year earlier, the central bank's workforce was larger by 19. The total number of employees in banks decreased by 113 compared to the previous quarter to stand at 14,994; this represents a year-on-year decrease of 256 employees. Branches of foreign banks increased their headcount by 11 compared to the previous quarter. Compared to the same period a year earlier, the number of employees in branches of foreign banks was lower by 20.

1.3 Structure of share capital in the banking sector

At the end of June 2026, the total share capital of banks and branches of foreign banks amounted to €8 billion. This is €1.6 billion more than in the previous quarter.

The ratio of domestic share capital to total subscribed capital in the banking sector decreased from 3.8% to 2.6% in the year to 30 June 2026.

At the end of the quarter under review, domestic share capital formed part of the subscribed capital in 5 of 22 domestic credit institutions and made up 100% of the subscribed capital in Slovenská záručná a rozvojová banka, a.s.

The share of foreign capital in the total subscribed capital of domestic banks increased in the year to 30 June 2026 from 96.2% to 97.4%, which represents an increase by 1.2 percentage points (p.p.).

Foreign capital from Luxembourg, expressed as a percentage, decreased from 8.3% to 6.5% compared with the same period of the previous year, representing a decline of 1.8 p.p. Over the same period, the share of capital from Belgium increased by 2.3 p.p. There were also decreases in the capital shares from Austria (1.3 p.p.) and Cyprus (0.9 p.p.), while capital from the Czech Republic increased its share by 2.4 p.p.

The category of 'other countries' includes all countries contributing less than 1% of the total foreign share capital of banks operating in Slovakia. Other countries accounted for capital amounting to €120.7 million in the reporting period.

2 Statistics of other monetary financial institutions

2.1 Balance-sheet statistics of credit institutions – assets

The total assets of banks and foreign bank branches operating in Slovakia, excluding NBS (herein after 'credit institutions') amounted to €136.1 billion at the end of June 2026.

The category making up the largest share of total assets was loan claims (80.8%). Year on year, their stock increased by 7.1% (€7.3 billion). The main driver was loan claims with a maturity of over 5 years, which grew by 10.1% (€7.2 billion). Loan claims with a maturity of 1 to 5 years decreased by 0.6% (€62.5 million) and loan claims with a maturity of up to 1 year grew by 1.1% (€237.6 million) in the year to the end of June 2026.

Credit institutions' holdings of securities other than shares and mutual fund shares/units made up 15.1% of their total assets at the end of June 2026. The volume of these securities holdings increased year on year by 6.3% (€1.2 billion). Securities other than shares and mutual fund shares/units with a maturity of over 2 years grew by 6.6% (€1.3 billion). Securities other than shares and mutual fund shares/units with a maturity of up to 1 year increased by 237.1% (€100.4 million).

Shares and other equity accounted for 0.6% of assets at the end of June 2026. The stock of shares and other equity decreased by 14.0% year on year (€131.7 million).

Other assets (including fixed assets) made up 2.7% of credit institutions' total assets at the end of June 2026. Their overall value increased by €333.2 million (10.1%) year on year.

Cash holdings accounted for 0.9% of credit institutions' assets at the end of June 2026. The stock of this category was €1.2 billion as of the reporting date, which reflects a year-on-year decrease by 1.4% (€17.3 million).

2.2 Balance-sheet statistics of credit institutions – liabilities

The total liabilities of credit institutions grew by 6.9% (€8.7 billion) year on year, mainly due to increases in the volume of deposits and loans received.

Deposits and loans received made up the majority of liabilities (73.2%). Their share increased by approximately 0.7 p.p. compared with the end of June 2025. Their volume increased by 7.9% (€7.3 billion) year on year, which breaks down as an increase in deposits and loans with a maturity of up to 1 year by 9.3% (€7.4 billion), and a decrease in deposits and loans with a maturity of over 1 year by 0.8% (€110.0 million).

Capital and provisions constituted 12.6% of credit institutions' total liabilities at the end of June 2026. The stock of this category increased year on year by 11.7% (€1.8 billion in absolute value).

Debt securities issued by credit institutions accounted for 11.6% of their total liabilities, which was slightly more than a year earlier. Their volume amounted to €15.7 billion at the end of June 2026, which was 9.4% (€1.4 billion) more than at the same point in the previous year.

The category of credit institutions' other liabilities accounted for 2.6% of their total liabilities. The value of other liabilities at the end of June 2026 was lower by €1.7 billion (32.1%) compared to a year earlier.

2.3 Selected asset and liability items by residency of counterparty

The vast majority of loan claims held by credit institutions in Slovakia (in total, €110.0 billion) are claims on domestic counterparties (88.9%). The stock of this category was €97.8 billion at the end of June 2026. Credit claims on entities from other euro area countries and from the rest of the world were €2.3 billion (2.1%) and €9.9 billion (9.0%) respectively.

The value of securities other than shares and mutual fund shares/units held by credit institutions was €20.5 billion at the end of June 2026. A significant majority were issued by domestic entities (68.3%, with a value of €14.0 billion). Securities issued in other euro area countries and the rest of the world amounted to €3.8 billion (18.4%) and €2.7 billion (13.3%) respectively.

Most of the shares and other equity owned by credit institutions (total value €807.4 million) were issued by entities in the rest of the world (58.2%, in absolute terms €469.7 million). Domestic issuers and issuers from other euro area countries accounted for 39.0% (€315.1 million) and 2.8% (€22.6 million) respectively.

At the end of June 2026, the total value of deposits and loans received by credit institutions was €99.7 billion. Deposits and loans received from domestic entities accounted for 82.7% of this volume (€82.4 billion). The liabilities of Slovak credit institutions to creditors from other euro area countries and the rest of the world amounted to €11.2 billion (11.3%) and €6.1 billion (6.1%) respectively.

Chart 7

Selected assets/liabilities: breakdown of counterparties by residency as at 30th June 2026 (%)

Source: NBS.

2.4 Selected asset and liability items by sector of counterparty

Domestic credit claims amounted to €97.8 billion as of June 2026, the vast majority of which (€87.0 billion, 88.9%) were claims on sectors other than monetary financial institutions (MFIs) and general government ('other sectors'). Claims on the domestic MFI and general government sectors accounted for 9.1% (€8.9 billion) and 2.0% (€1.9 billion) of claims respectively.

The volume of securities other than shares and mutual fund shares/units in credit institutions' portfolios at the end of June 2026 was €14.0 billion. The majority of these securities (96.1%, €13.5 billion) were issued by the general government sector. Securities in this category issued by domestic MFIs accounted for 3.1% (€430.6 million) and the remaining 0.9% (€120.5 million) were issued by other domestic sectors.

The value of domestic shares and other equity (including investment fund shares/units) held by credit institutions amounted to €315.1 million. In a breakdown by issuer, other sectors accounted for 99.5% (€313.6 million). Shares and other equity in domestic MFIs held by credit institutions in Slovakia accounted for 0.3% (€1.1 million).

Deposits and loans received from domestic entities stood at €82.4 billion in total as of the reporting date. The majority (93.7%, €77.3 billion) came from other sectors. Liabilities for deposits and loans received from the domestic general government sector made up 5.9% (€4.8 billion). Domestic MFIs accounted for 0.4% (€321.6 million) of the outstanding amounts of domestic deposits and loans received.

Chart 8

Selected assets/liabilities: sectoral breakdown of domestic counterparty as at 30th June 2026 (%)

Source: NBS.

Note: Counterparty sector (as of 31.12.2014 according to ESA 2010):

1) Monetary financial institutions - MFIs (S.121 + S.122+S.123).

2) General government (S.13)

3) Other sectors = Investment funds other than money markets funds (S.124) + Other financial corporations (S.125 + S.126 + S.127) + Insurance corporations (S.128) + Pension funds (S.129) + Non-financial corporations (S.11) + Households and Non-profit institutions serving households (S.14 and S.15).

Loan claims on clients in other euro area countries by Slovak credit institutions stood at €2.3 billion at the end of June 2026. Claims on other sectors accounted for 71.5% of such claims (€1.7 billion) and the other 28.5% (€665.3 million) were claims on the MFI sector in other euro area countries.

The value of banks' holdings of securities (other than shares and mutual fund shares/units) issued in other euro area countries amounted to €3.8 billion at the end of June 2026. The majority of such securities (85.9%, €3.2 billion) were issued by the general government sector, while securities issued by MFIs and by other sectors accounted for 10.7% (€403.3 million) and 3.4% (€127.2 million) respectively.

The value of non-domestic euro area shares and other equity held by credit institutions in Slovakia stood at €22.6 million. Nearly all the assets in this category (98.7%, €22.3 million) came from other sectors, while MFIs were the issuers of 1.3% (€288.2 thousand).

Deposits and loans received from residents of other euro area countries amounted to €11.2 billion. The majority of this category (66.6%, €7.5 billion) consisted of deposits and loans received from MFIs. Deposits from other sectors (€3.7 billion) accounted for 33.4%.

Chart 9

Selected assets/liabilities: sectoral breakdown of counterparty from other euro area member states as at 30th June 2026 (%)

Source: NBS.

Loan claims on the rest of the world (i.e. countries outside the euro area) amounted to €9.9 billion at the end of June 2026. The majority (64.4%, €6.4 billion) were claims on MFIs. Claims on other sectors (€3.4 billion) represented 34.7%.

Securities other than shares and mutual fund shares/units issued by residents of the rest of the world made up holdings in the portfolios of credit institutions in Slovakia worth €2.7 billion. Most of these (88.9%, €2.4 billion) were issued in the general government sector. MFI securities accounted for 3.0% (€82.8 million), while other sectors issued 8.0% (€218.7 million).

Slovak credit institutions held shares and other equity issued in the rest of the world with a value of €469.7 million. The majority were issued by MFIs (93.5%, €439.0 million) followed by other sectors (6.5%, €30.8 million).

Deposits and loans received from residents in the rest of the world stood at €6.1 billion as of 30 June 2026. Other sectors accounted for 53.5% (€3.2 billion), while MFIs accounted for 46.0% (€2.8 billion).

2.5 Assets and liabilities of credit institutions: year-on-year changes

The aggregate assets of credit institutions have shown year-on-year growth at the end of every quarter in the last two years. Their steepest year-on-year increase – 7.2% (€9.0 billion) – was recorded at the end of the fourth quarter of 2025. The year-on-year growth in total assets to the end of June 2026 was 6.9% (€8.7 billion), which was 1.8 p.p. higher than the growth recorded in the year to June 2025.

The largest year-on-year movement in aggregate loan claims in recent history was in the second quarter of 2026 – an increase in their stock by 7.1%, which was a 5.0 p.p. larger increase than in the year to June 2025. Considering just loan claims with a maturity of up to one year, their largest recent movement was a decrease of 13.4% (€3.2 billion), recorded in the second quarter of 2025. Loan claims with a maturity of 1 to 5 years experienced their strongest growth in recent history in the second quarter of 2025, when they increased by 23.9% (€2.2 billion). As of June 2026, they decreased by 0.6% (€62.5 million). The largest year-on-year movement in loan claims with a maturity of over 5 years was in the second quarter of 2026, when they increased by 10.1% (€7.2 billion).

Securities other than shares and mutual fund shares/units had their largest year-on-year increase in recent history in the third quarter of 2025, which amounted to 27.0% (€4.3 billion). In the reporting quarter, the category grew by 6.3% (€1.2 billion), which is 17 p.p. lower than a year earlier.

The largest growth in the total stock of shares and other equity (including investment fund shares/units) was in the third quarter of 2024, when it grew by 28.1% (€226.2 million).

The largest year-on-year change in other assets (including fixed assets) in the historical context was in the second quarter of 2026, when there was growth of 10.1% (€333.2 million).

Cash holdings of credit institutions showed their most significant annual change in percentage terms in the first quarter of 2025, with a year-on-year decrease of 9.8% (€118.8 million).

2.6 Analysis of the profit/loss of credit institutions

2.6.1 Current period profit/loss at the end of June 2026

Based on the available data, the cumulative profit of the banking sector as of June 2026 amounted to €650.2 million, representing a 13.7% increase compared to the same period a year earlier.

Net interest income grew by 5.0% year on year to the end of June 2026. The largest change in recent history was observed in the second quarter of 2024 (13.1%). Other interest income decreased by 6.2%, while interest income on securities increased by 27.3%. Other interest expenses decreased by 21.0% and interest expenses on securities grew by 14.5%.

At the end of June 2026, net non-interest income was 7.1% higher at €552.9 million. The increase in this category was mainly driven by dividends received, which increased year on year by 192.3%.

General operating expenses increased by 4.6% to €858.1 million in the twelve months to June 2026.

Net creation of reserves and provisions was lower by 17.4% year on year as of June 2026.

Chart 13

Current period profit/loss (EUR million)

2.10.3 Deposits received from NFCs – interest rates and stocks

In the twelve months to the reporting date, the average interest rate on **deposits with an agreed maturity of up to 2 years** remained unchanged at 2.2% p.a., while the average interest rate on **deposits with an agreed maturity of over 2 years** was also unchanged at 2.2% p.a.

The share of deposits **with an agreed maturity of up to 2 years** decreased year on year by 0.1 p.p. to 99.5% of the total volume of deposits with an agreed maturity received from non-financial corporations (NFCs). **Deposits with an agreed maturity of over 2 years** made up 0.5%. The total volume of NFC deposits with an agreed maturity grew year on year by 10.8%.

Chart 64

NFC deposits with an agreed maturity – interest rates and stocks (EUR millions, % p.a.)

Source: NBS.

2.10.4 New NFC deposits – interest rates and volumes

The average interest rate on new deposits **with an agreed maturity of over 2 years** increased, year on year, by 0.5 p.p. to 2.8% p.a., but this category's share of the total stock of deposits with an agreed maturity remained very small. The average interest rate on new NFC deposits **with an agreed maturity of 1 to 2 years** was 0.7 p.p. higher year on year at 3.0% p.a., whereas there was a year-on-year decrease in the average interest rate on new deposits **with an agreed maturity of up to 1 year** by 0.1 p.p. to 2.1% p.a. This category of deposits is the most significant in volume terms, accounting for 99.8% of the total volume of new NFC deposits with an agreed maturity.

3 Collective investment – investment funds

In the Slovak financial market, mutual funds are represented by eight domestic and two foreign management companies managing 90 open-ended and 2 closed-ended mutual funds as of 30 June 2026.

Since December 2025, NBS has also started to collect data from collective investment undertakings other than mutual funds, specifically from collective investment undertakings with legal personality (at present, all such entities are registered under Section 4(2)(b) of the Collective Investment Act). As of 30 June 2026, the number of active entities reached 30, with total assets amounting to €232.1 million, representing 1.6% of the total assets of investment funds.

3.1 Current developments in the domestic collective investment market

For the purposes of monetary and financial statistics compiled by the European Central Bank, investment funds are analysed, according to their investment strategy, in the following categories: money market funds, bond funds, equity funds, mixed funds, real estate funds, hedge funds and other funds.

As of 30 June 2026, mixed funds accounted for the largest share of total assets (33.7%), followed by equity funds (28.2%) and real estate funds (24.0%). Bond funds accounted for 12.4% of total assets, hedge funds for 0.1% and other funds for 1.6%.

Table 8

Total assets of investment funds broken down by type of fund (year-on-year percentage changes)

Total assets	Year-on-year change in %

Source: NBS.

3.2 Asset structure of domestic investment funds

3.2.1 Bond funds

Bond funds invest primarily in debt securities and in term deposits with banks.

As of 30 June 2026, most of their assets under management were debt securities (61.4%). Another significant part of their investments were in fixed-term deposits and current accounts (23.6%) and in investment fund shares/units (14.5%). The remaining 0.6% consisted of other assets and financial derivatives.

In the second quarter of 2026, the geographical breakdown of debt security issuers in bond fund portfolios was as follows: domestic issuers 26.6%, issuers from other euro area countries 32.4%, and issuers from the rest of the world 41.0%.

From a sectoral perspective, the most commonly held debt securities were bank bonds (40.1%). These were followed by government bonds (22.4%) and bonds issued by non-financial corporations (NFCs), with a share of 20.3%. Other financial institutions accounted for 17.2%.

In terms of residual maturity, bond funds' securities portfolios broke down as follows: 18.2% of the securities had a maturity of up to 1 year, 17.7% a maturity of 1 to 2 years, and 64.2% a maturity of over 2 years.

Chart 71

Maturity breakdown of debt securities in the portfolio of bond funds as at 30 June 2026 (EUR millions)

Source: NBS.

3.2.2 Equity funds

At the end of June 2026, the main asset types held by equity funds were investment fund shares/units (59.6%), followed by shares and other equity (37.1%). Bank deposits made up 2.7% and other items in aggregate 0.7%.

The geographical breakdown of investment fund shares/units in the quarter under review was as follows: 0.01% domestic, 95.7% from other euro area countries and 4.3% from the rest of the world.

The equities portfolio was dominated by shares of non-financial corporations from the rest of the world (72.7%), followed by shares of non-financial corporations from other euro area countries (9.9%). The contributions of other sectors amounted to less than 5%.

Source: NBS.

Note: EMU = issuers from other euro area member states; RoW = issuers from the rest of the world.

3.2.3 Mixed funds

The main asset type in mixed funds has long been investment fund shares/units. They accounted for 59.9% of mixed-fund assets at the end of June 2026. Other significant asset types for mixed funds during the review period were debt securities (27.0%) and bank deposits (10.8%). Equities made up 1.7% and other assets, including financial derivatives, 0.6%.

From a geographical perspective, non-domestic euro-area investment fund shares/units dominated portfolios, accounting for 83.1% of the total. They were followed by domestic issues (12.7%) and issues from the rest of the world (4.3%).

Mixed funds' debt securities holdings at the end of June 2026 broke down in terms of issuer residency as follows: the majority had domestic issuers (51.2%) followed by issuers from the rest of the world (31.0%). Securities issued by residents of other euro area countries accounted for 17.8% of the overall stock.

The most significant issuing sectors were other financial intermediaries (39.0 %), general government (26.6%) and the banking sector (24.4%). Non-financial corporations accounted for 6.1%, with other sectors making up the remaining 2%.

In terms of residual maturity, mixed funds' securities holdings at the end of the second quarter of 2026 broke down as follows: securities with a maturity of up to 1 year 29.5%, maturities of 1 to 2 years 11.5%, and maturities over 2 years 58.9%.

(EUR millions)**

Source: NBS.

3.2.4 Real estate funds

Real estate funds have a strategy of investing primarily in the equity of real estate companies. They also provide loans to real estate companies in accordance with applicable legislation.

Equity holdings made up 52.3% of assets under management at the end of the second quarter of 2026, with bank deposits and loans to real estate companies accounting for a further 30.5%. During the quarter under review, real estate funds also had smaller holdings of investment fund shares/units (9.8%) and debt securities (5.0%). Other assets accounted for 2.3%.

In the second quarter of 2026, the equity investments of real estate funds went exclusively to non-financial corporations (S.11), with 81.1% of these investments going to domestic companies, 17.8% to companies in the rest of the world and 1.1% to companies in other euro area countries. Loans were provided mainly to domestic real estate companies, with companies from neighbouring countries receiving a smaller share.

Source: NBS.

Note: SK = domestic issuers; EMU = issuers from other euro area member states; RoW = issuers from the rest of the world.

3.2.5 Other funds

The category of 'other investment funds' comprises funds whose investment strategy does not fit into any of the preceding categories. From the fourth quarter of 2025, both the number of these undertakings and the volume of their assets increased significantly, mainly due to most of the newly reported collective investment undertakings with legal personality falling under this category.

As of 30 June 2026, shares and other equity made up the majority of the assets of other funds, accounting for 77.5%. Another significant category was bank deposits and loans provided (20.0%). Debt securities (1.5%), investment fund shares/units (0.7%) and other assets (0.4%) accounted for smaller shares.

4 Leasing, factoring and consumer credit companies

Under the ESA 2010 sector classification, these companies are categorised in sector S.125 – Other financial intermediaries², in the subdivision of Financial corporations engaged in lending. The list of entities reporting balance sheet data to Národná banka Slovenska under the applicable NBS Decree³ was updated in 2025.

In terms of assets, the second quarter of 2026 saw favourable developments for all types of companies – leasing companies increased their assets by 4.5%, factoring and other companies increased theirs by 6.2%, and consumer credit companies increased theirs by 0.1%.

Table 9

Total assets of financial corporations engaged in lending (year-on-year percentage changes)

Total assets	Year-on-year change in %								
	VI. 2024	IX. 2024	XII. 2024	III. 2025	VI. 2025	IX. 2025	XII. 2025	III. 2026	VI. 2026
Factoring and other companies	-1.9	-0.2	-8.6	-6.7	0.6	8.1	19.5	16.0	6.2
Consumer credit	2.1	-3.5	5.3	-6.0	-10.6	-5.7	-7.0	12.0	0.1
Financial leasing	8.6	7.0	5.5	5.8	7.1	6.9	7.0	8.4	4.5

Source: NBS.

Leasing companies have long been the market leaders among non-banking financial institutions engaged in lending. In the second quarter of 2026, they accounted for 83% of all assets in this sector. They were followed by consumer credit companies (11%) and factoring and other companies (6%).

² The European system of accounts (ESA 2010) defines 'Other financial intermediaries, except insurance corporations and pension funds' as financial corporations and quasi-corporations which are principally engaged in financial intermediation by incurring liabilities in forms other than currency, deposits and/or close substitutes for deposits from institutional units other than monetary financial institutions or insurance technical reserves.

³ Decree No 19/2014 of Národná banka Slovenska on the submission of statements by factoring, consumer credit and leasing companies for statistical purposes (Notification No 248/2014).

Chart 88

Evolution of total assets by type of business (EUR millions)

Source: NBS.

Chart 89

Total assets of financial corporations engaged in lending broken down by type of company as at 30 June 2026

Source: NBS.

The geographical breakdown of the loan claims of financial corporations engaged in lending shows that they lend predominantly to domestic customers.

Financial leasing was used exclusively by domestic clients at the end of the reporting quarter. Most clients are non-financial corporations (87.7%), with households in second place (9.7%). Other sectors in aggregate make up 2.6% of clients.

In the consumer credit sector, domestic clients made up 92.0% of the customer base as of 30 June 2026. The remainder were from other euro area countries. Since the purchase of consumer goods through instalment credit is traditionally a significant form of household financing in Slovakia, in the reporting quarter, households continued to make up the majority of domestic customers (77.2%). NFCs constituted the remaining 22.8%.

At the end of the second quarter of 2026, domestic customers made up 96.5% of factoring and other companies' total customers. They were followed by customers from other euro area

countries (2.3%) and from the rest of the world (1.3%). The majority of domestic clients were households, accounting for 69.3%, while NFCs made up the remaining 30.7%.

Regarding the flow of funds across the individual economic sectors, an interesting aspect is the sources of the funds that the companies under analysis use to provide credit and loans through non-bank lending channels.

The main source of financing was external (debt) capital (87.3%). External capital was obtained mostly in the form of bank loans, which accounted for a share of 65.5% as of 30 June 2026. The remainder consisted of proceeds from issues of debt securities (26.2%) and loans and borrowings from group companies and clients (8.2%). Own funds consisted mainly of share capital, retained earnings from previous periods, shares and other equity holdings.

5 Securities

5.1 Debt securities

In the second quarter of 2026, the volume of debt securities issued by Slovak economic entities increased quarter on quarter by 0.8%. What growth there was came mainly from monetary financial institutions, whose total issue size grew to €16,292 million, and non-monetary financial institutions, with issue size of €5,581 million. Government bonds fell slightly to €77,904 million and the volume of bonds issued by non-financial corporations (NFCs) amounted to just under €3,313 million.

Net issuance (the difference between newly issued and redeemed issues) increased by €759 million compared to the previous quarter. The volume of net issuance increased in the banking sector by €873 million and in the non-monetary financial institution sector by €38 million. Conversely, net issuance fell by €80 million in the general government sector and by almost €72 million for NFCs.

Table 10
Debt securities (in thousands of EUR)

Month	Outstanding amounts					Net issues				
	Total	Monetary financial institutions	Non-monetary financial institutions	Non-financial corporations	General government	Total	Monetary financial institutions	Non-monetary financial institutions	Non-financial corporations	General government

Chart 94

Debt securities by sector (outstanding amounts, EUR millions)

Source: NBS.

In the second quarter of 2026, outstanding amounts of issues grew month on month by 1.3% in April, fell by 0.7% in May, and rose again by 0.2% in June.

Chart 95

Debt securities (outstanding amounts, month-on-month changes)

Source: NBS.

Chart 96

Debt securities (outstanding amounts, EUR millions, Q2 2026)

Source: NBS.

In the second quarter, 72 new issues of debt securities were placed on the securities market. Of these, 45 were issues from captive financial institutions. Banks issued 18 bonds, NFCs 4, financial auxiliaries 2 bonds and the Ministry of Finance of the Slovak Republic issued 3 government bonds, which were issued abroad.

Net issuance of short-term debt securities increased by €5 million in the second quarter of 2026, mainly due to captive financial institutions (net increase of €3.5 million) and NFCs (an increase of almost €2 million).

Net issuance of long-term debt securities increased by approximately €754 million in the reporting quarter. The largest increase (€873 million) was in the banking sector. This was followed by the captive financial institutions sector with an increase of nearly €30 million and other financial intermediaries with an increase of €4 million. A small increase (€0.5 million) was also recorded for issuance in the financial auxiliaries sector. On the other hand, there were decreases in the general government sector (by nearly €80 million) and the NFCs sector (by €74 million).

Chart 97

Debt securities (net issues, EUR millions, Q2 2026)

Source: NBS.

In a breakdown by sector, general government continues to account for the largest share of outstanding issuance (75.6%). It was followed by monetary financial institutions (the banking sector) (15.8%), other financial institutions (5.4%) and non-financial corporations (3.2%). Most issues had fixed coupons (95.1%). Variable-coupon issues accounted for just 4.1% of the total volume, while zero-coupon issues accounted for just 0.8% of the volume of debt securities. Euro-denominated issues accounted for 98.3% of the volume of debt securities, leaving foreign currencies to make up 1.7%. A similar breakdown by coupon type and currency was also seen in new issuances in the second quarter of 2026 itself.

Debt securities by currency

Source: NBS.

Note: The individual items are classified according to the outstanding amounts of issues as at 30 June 2026.

The following charts show the outstanding amounts of individual issues in the general government, banking and captive financial institution sectors by their outstanding amounts and maturity dates.

The highest concentration of outstanding debt securities issued by captive financial institutions in the Slovak market is in amounts of up to €25 million, with maturities up to mid-2027. The largest outstanding amount is around €160 million and the longest residual maturity is 10 years, which applies to an issue from the second quarter of 2026.

Chart 101

Debt securities: outstanding amounts of domestic issues in S.127 sector (EUR millions)

Source: NBS.

The highest concentration of debt securities issued by banks is in outstanding amounts of up to €50 million, and maturities up to December 2028. The largest outstanding amount is for two issues of covered bonds amounting to €750 million, which were issued in the first and second quarter of 2026. The longest maturity extends to 2037.

Chart 102

Debt securities: outstanding amounts of issues in S.122 sector (EUR millions)

Source: NBS.

Note: Chart does not take into consideration perpetual bonds to avoid their effect as its maturity is not defined.

There are fewer issues of government bonds compared to the previous two sectors but the balances are an order of magnitude larger. The issues with the largest outstanding amount are for €5 billion and the last of the current issues has its maturity in 2068.

Chart 103

Debt securities: outstanding amounts of issues in S.1311 sector (EUR millions)

Source: NBS.

The maturity profile shows how government debt repayments would develop assuming that there would be no more new government bond issues and all existing issues would be repaid at maturity.

Chart 104

Government bonds: maturity profile (EUR millions)

Source: NBS.

The following chart shows only the outstanding issues of government bonds with a coupon according to their market price and coupon yield at the end of the second quarter of 2026. The average market price⁴ of these government bonds, expressed as a percentage, was 95.14% and the coupon yield was 2.6%.

Chart 105

Government bonds: outstanding amounts (coupon bonds only)

Source: NBS, CSDB, issue prospectus.

Note: The bubble in this chart is directly proportional in size to the outstanding amounts of the individual issues, while the centre of the bubble is given by the intersection of the market price (Source: ECB Centralised Securities Database) and the coupon yield (Source: Issue conditions).

⁴ Weighted arithmetic mean, using outstanding issues as weights.

5.2 Listed shares

The outstanding amount of quoted share issues in the second quarter of 2026 stood at €3,039 million, which was slightly lower (€11 million) compared with the previous quarter due to a decline in the non-financial corporations (NFCs) sector. Market capitalisation in the banking sector remained unchanged compared to the previous quarter.

Table 11
Quoted shares (in thousands of EUR)

Month	Outstanding amounts		
	Total	Credit institutions (S.122)	Non-financial corporations (S.11)
2025 / 06	2,350,634	1,614,051	736,583
2025 / 09	2,325,748	1,601,929	723,820
2025 / 12	2,410,950	1,704,969	705,981

6 Selected macroeconomic indicators

6.1 Long-term interest rates

With effect from 1 July 2013, the approach based on a 'basket of bonds' has been replaced with a 'benchmark-oriented approach'⁵, initially using government bond SK4120009044 as a benchmark. On 1 May 2014, government bond SK4120008871 became the benchmark bond, followed by bond SK4120007543 (with effect from 1 June 2015), bond with ISIN SK4120010430 (with effect from 1 June 2016), government bond SK4120009762 (with effect from 1 June 2018), bond SK4120015173 (with effect from 1 November 2019), bond SK4000017059 (with effect from 1 January 2021), bond SK4000017166 (with effect from 1 October 2021), government bond SK4000021986 (with effect from 1 December 2022), government bond SK4000023230 (with effect from 1 August 2023), government bond SK4000024865 (with effect from 1 April 2024) and government bond SK4000022539 (the current benchmark bond since 1 April 2025).

During the reporting quarter, the average interest rate decreased by 0.163 p.p. to 3.51%.

Chart 110

Benchmark – yield to maturity (p.a.)

Source: MTS Slovakia.

⁵ Methodological notes in Section 7.6. Long-term interest rate

6.2 Basic interest rates

The interest rate on the ECB's main refinancing operations was increased to 2.4%⁶ during the reporting quarter. The interest rate on the marginal lending facility was increased to 2.65% and the deposit facility rate was increased to 2.25%. At the end of June, the yield of a two-year government bond was 2.67% (representing a slight increase of 0.1 p.p. compared to the previous quarter). The yield on the 5-year government bond stood at 3.05% (down 0.2 p.p.). The average ten-year government bond yield was 3.62% (up by 0.12 p.p.).

⁶ The current value of this key ECB interest rate has applied since 17 June 2026.

7 Methodological notes

7.1 Balance-sheet statistics of monetary financial institutions

Credit institutions in Slovakia: banks and branches of foreign banks operating in Slovakia, (except Národná banka Slovenska).

Household sector – this sector includes:

a/ Households (S.14): a sub-sector comprising households (sole proprietors) and the population (citizens). Households (sole proprietors) are private entrepreneurs not registered in the Commercial Register, doing business under the Trade Licensing Act, and natural persons doing business under a law other than the Trade Licensing Act and not registered in the Commercial Register, and private farmers not registered in the Commercial Register. The population includes households in their capacity as final consumers (citizens' accounts).

b/ Non-profit institutions serving households (S.15): a sub-sector comprising civic interest associations (unions, societies, movements, trade unions, etc.) and their organisational units, political parties and movements, their organisational units, church and religious societies, and institutions ensuring the proper conduct of certain professions (professional organisations). This sub-sector also includes the following institutions: funds; apartment owners' associations; land, forest and pasture associations; organisations providing publicly beneficial services; humanitarian societies; social, cultural, recreational and sports associations and clubs; charities; church and private schools; private preschool facilities; non-public special-purpose funds (e.g. the anti-drug fund); interest associations of legal entities.

Monetary financial institutions (MFI): financial institutions which together form the money-issuing/creating sector of the euro area. These include resident central banks, credit institutions and other resident financial institutions whose business is to receive deposits and/or other redeemable instruments from entities other than MFIs and, for their own account (at least in economic terms), to grant credit and/or invest in securities. The latter group consists predominantly of money market funds, i.e. funds investing in short-term and low-risk instruments, which usually have a maturity of up to and including one year.

Non-financial corporations (S.11): business entities that are registered in the Commercial Register, i.e. domestic or foreign corporate entities, domestic natural persons registered in the Commercial Register and engaged in profit-oriented activities in any area of business, except in financial intermediation and insurance. The non-financial sector also includes subsidised organisations, public institutions and non-profit institutions whose expenses are covered with sales by 50 percent or more.

Non-performing loans: defaulted loans that are subject to the provisions of Section 73 of NBS Decree No. 4/2007 of 13 March 2007 (as amended) on banks' own funds and own funds requirements and on investment firms' own funds and own funds requirements.

A specific borrower is considered to be in default if

- a) the bank assesses that the borrower will probably fail to meet its commitments to the bank, its subsidiary or parent company, without the security being realised;
- or
- b) the borrower is more than 90 days in arrears with a significant commitment to the bank, its subsidiary or parent company.

Principle of residency: the principle that a counterparty's country of residence is the country in which the counterparty has a centre of economic interest. This means that an economic agent is considered to be resident in the country where the agent operates for one or more years, or intends to operate on a permanent basis, or where the agent has already been registered.

Remaining assets: a residual item on the asset side of the balance sheet. In addition to fixed assets and financial derivatives with a positive fair value, this item includes, for example, accrued revenues, including accrued interest received; profit share to be received; prepaid expenses; prepaid insurance premiums; outstanding insurance claims; claims of credit institutions not related to their main business; other cash items and cash in transit, transit items, suspense items, collection claims, advance payments and other asset items not elsewhere classified.

Remaining liabilities: a residual item on the liability side of the balance sheet. This item includes, for example, financial derivatives with a negative fair value; accrued expenses, including accrued interest payable on deposits and loans received, and on securities; profit share to be paid; deferred revenues; liabilities of credit institutions not related to their main business; provisions representing liabilities towards third parties; transit items; suspense items; funds waiting for settlement; subsidies; net equity of households in pension fund reserves, liabilities arising from collection, prepayments received and other liability items not elsewhere classified.

7.2 Interest rate statistics of monetary financial institutions

Harmonised MFI interest rate statistics are compiled from data obtained from credit institutions on deposits received from, and loans provided to, non-financial corporations and households, which are both Slovak and euro area residents. The term *households* refers to the population, including households, sole proprietors and non-profit institutions serving households. The term *new loans or new deposits* covers all new deposits received or loans granted during the respective reference month.

The term *outstanding amount* of loans or deposits means balances at the end of the respective reference period. Interest rates applied by credit institutions on loans or deposits are calculated as weighted arithmetic averages of the rates agreed on an annual basis.

In the case of loans provided to households *for house purchase* and *loans for consumption*, the *annual percentage rate of charge* is also reported to express the borrower's total credit-related costs. The borrower's total costs comprise the element of interest rate and the element of other credit-related costs. The collection of the annual percentage rates of charge for statistical purposes allows developments in credit-related charges to be monitored over time.

Secured loans represent a new category, which is required for the compilation of interest rate statistics as from 2010. These are the loans secured by any type of collateral or a personal guarantee, the value of which is higher than, or equal to, the new loan's total volume. A partially secured loan is to be classified as unsecured.

The category of *loans of up to €1 million* for non-financial corporations is designed specifically for small and medium-sized enterprises. The *loans of over €1 million* category is intended for large corporations. Interest rates reflect the borrower's economic power to negotiate appropriate credit terms and conditions. Interest rate developments indicate that loans of *up to €1 million* are provided at higher rates than loans of *over €1 million*.

Agreed average annual interest rate: average interest rate individually agreed between a bank and its customer for a loan, expressed in annualised terms (percentage per annum). An agreed average annual rate is to be determined on the basis of all interest rates on loans.

An agreed interest rate is converted into an average annual interest rate according to the formula:

$$x = \left(1 + \frac{r_{ag}}{n} \right)^n - 1,$$

where

x is the agreed average annual interest rate;

r_{ag} is the annual interest rate agreed between the bank and its customer (borrower). The dates of loan interest capitalisation are set for the year at regular intervals;

n is the number of periods of loan interest capitalisation per year, i.e. 1 for annual payments; 2 for semi-annual payments, 4 for quarterly payments, and 12 for monthly payments.

Interest rate statistics (outstanding amounts): these cover the outstanding amounts of bank loans of all types provided to customers and not yet repaid, and the outstanding amounts of all deposits received from customers and not yet redeemed, in all periods up to the date of reporting (reference period). The average interest rates agreed are expressed in annualised terms (p.a.). The method of calculation depends on the periodicity of capitalisation. The criterion for outstanding amount classification is the maturity of loans or the term of deposits.

Interest rate statistics (new business): these cover all the new loan and deposit agreements made between banks and their customers in the period under review (month). This applies to any agreement in which an interest rate is set for the first time, as well as to existing agreements that are renegotiated with the customers and in which the original terms and conditions are changed with an impact on interest levels (e.g. the new agreement is not prolonged automatically, variable interest rates are not changed, etc.). Interest rate statistics on new transactions cover the actual rates of interest agreed in individually negotiated agreements in the reference month. The method for calculating the average interest rates agreed, in annualised terms, depends on the periodicity of capitalisation.

Initial rate fixation: the period of time, set in advance, during which the interest rate on a loan is fixed. In interest rate statistics for new loans (new business), **only** the rate agreed for an initial fixation period prior to the loan agreement is reported. Loans **without** interest rate fixation are included in the category of 'variable rates and initial rate fixation for up to one year'.

7.3 Investment fund statistics

Domestic funds are divided based on their legal form into:

- mutual funds,
- investment funds with variable capital established in the form of an investment company with variable capital having its registered office in the territory of the Slovak Republic.
- other domestic entities with legal personality established in the form of a commercial company or cooperative having its registered office in the territory of the Slovak Republic, which collects funds from several investors for the purpose of investing them in accordance with a defined investment policy for the benefit of those investors (these entities are often referred to as collective investment undertakings with reference to Section 4(2)(b) of the Collective Investment Act).

Investment funds can be divided into categories according to the instruments in which they predominantly invest. According to their investment focus, investment funds are classified as money market funds, equity funds, bond funds, mixed funds, real estate funds, hedge funds and other funds. The level of return, as well as the degree of risk, is then directly linked to the fund's investment strategy. As a general rule, the higher the potential return, the higher the risk of the investment. The limits for investing funds obtained from the sale of mutual fund shares/units are defined in the Collective Investment Act.

From the perspective of the ESA 2010 sector classification of institutional units, money market funds (MMFs) and short-term money market funds (STMMFs) are classified in sector S.123, and the other categories of mutual funds, herein referred to as investment funds, are classified in sector S.124.

Statistics on the assets and liabilities of investment funds are governed by a Regulation of the European Central Bank.⁷

Money market funds (MMFs) are collective investment undertakings complying with the following criteria:

- a) they pursue the investment objective of maintaining a fund's principal and providing a return in line with the interest rates of money market instruments;
- b) they invest in money market instruments which comply with the criteria for money market instruments set out in Directive 2009/65/EC of the European Parliament and of the Council of 13 July 2009 on the coordination of laws, regulations, and administrative provisions relating to undertakings for collective investment in transferable securities, or deposits with credit institutions or, alternatively, ensure that the liquidity and valuation of the portfolio in which they invest is assessed on an equivalent basis;
- c) they ensure that the money market instruments they invest in are of high quality, as determined by the management company. The quality of a money market instrument shall be considered, inter alia, on the basis of these factors:
 - the credit quality of the money market instrument;
 - the nature of the asset class represented by the money market instrument;
 - for structured financial instruments, the operational and counterparty risk inherent within the structured financial transaction;
 - the liquidity profile;
- d) they ensure that their portfolio has a weighted average maturity of no more than six months and a weighted average life of no more than twelve months;
- e) they provide daily net asset value and a price calculation of their shares/units, and daily subscription and redemption of shares/units;
- f) they limit investment in securities to those with a residual maturity until the legal redemption date of less than or equal to two years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days, whereby floating rate securities should be reset to a money market rate or index;
- g) they limit investment in other collective investment undertakings to those complying with the definition of MMFs;
- h) they do not take direct or indirect exposure to equity or commodities, including via derivatives, and only use derivatives in line with the money market investment strategy of the fund. Derivatives which give exposure to foreign exchange may only be used for hedging purposes. Investment in non-base currency securities is allowed provided the currency exposure is fully hedged;
- i) they have either a constant or fluctuating net asset value.

⁷ REGULATION OF THE EUROPEAN CENTRAL BANK (EU) 2024/1988 of 27 June 2024 on investment fund statistics (ECB/2024/17)

The following terms are used in the definition of a money market fund:

Close substitutability for deposits in terms of liquidity: the ability of shares/units of collective investment undertakings, under normal market circumstance, to be repurchased, redeemed or transferred, at the request of the holder, where the liquidity of the shares/units is comparable to the liquidity of deposits.

Money market instruments: instruments of a high credit quality, if they have been awarded one of the two highest available short-term credit ratings by each recognised credit rating agency that has rated the instruments or, if the instruments are not rated, they are of an equivalent quality as determined by the management company's internal rating process. Where a recognised credit rating agency divides its highest short-term rating into two categories, these two ratings shall be considered as a single category and therefore the highest rating available.

When the weighted average lifetime and the weighted average maturity are calculated, the impact of financial derivative instruments, deposits and efficient portfolio management techniques are to be taken into account.

Undertakings for collective investment: undertakings the sole object of which is the collective investment in transferable securities of capital raised from the public and the shares/units of which are, at the request of holders, redeemed directly or indirectly, out of those undertakings' assets. Such undertakings may be constituted under the law of contract (as *common funds* managed by an asset management company), or under the trust law (as *unit trusts*), or under the commercial law (as *investment companies*).

Weighted average life: the weighted average of the remaining maturity of each security held in a fund, meaning the time until the principal is repaid in full, disregarding interest and not discounting. Contrary to the calculation of the weighted average maturity, the calculation of the weighted average life for floating rate securities and structured financial instruments does not permit the use of interest rate reset dates and instead only uses a security's stated final maturity. The weighted average life is used to measure the credit risk: the longer the reimbursement of principal is postponed, the higher the credit risk. The weighted average life is also used to limit the liquidity risk.

Weighted average maturity: a measure of the average length of time to maturity of all of the underlying securities in the fund weighted to reflect the relative holdings in each instrument, assuming that the maturity of a floating rate instrument is the time remaining until the next interest rate reset to a money market rate, rather than the time remaining before the principal value of the security must be repaid. In practice, weighted average maturity is used to measure the sensitivity of a MMF to changing money market interest rates.

7.4 Statistics of other financial intermediaries

According to the sectoral classification of economic entities (ESA 2010), the companies under analysis are included in the S.125 sector – *other financial intermediaries*, as a subcategory referred to as *financial corporations engaged in lending* through the acceptance of liabilities in forms other than cash, deposits, and/or close substitutes for deposits from institutional units other than monetary financial institutions, or insurance technical reserves.

The S.125 sector comprises the following types of companies:

- 1. Financial companies engaged in lending** – companies granting credits and loans to non-financial corporations and households. They include financial leasing companies, factoring companies, and consumer credit companies.

2. **Securities and derivatives dealers** – private individuals or firms specialising in securities market transactions; 1) they provide assistance to companies issuing new securities, provide guarantee for new securities and their placement on the market; 2) they trade in existing or new securities **for their own account**.
3. **Financial vehicle corporations** – financial companies created to be holders of securitised assets or liabilities that have been removed from the balance sheets of corporations within the scope of their restructuring.

Other financial intermediaries are engaged primarily in long-term financing, which distinguishes the S.125 sector from that of S.122+S.123 (monetary financial institutions).

Data on OFIs need to be collected for the purpose of monitoring their activities in financial intermediation outside the monetary financial institutions sector (MFIs – banks, branches of foreign banks, and money market funds). The activities performed by OFIs are similar to those pursued by MFIs. The two types of institutions complement each other. Since the balance sheets of MFIs reported to the European Central Bank for statistical purposes contain no data on OFIs (though OFIs are owned fully or partly by MFIs), statistical data on OFIs need to be collected for the sake of a more detailed statistical overview.

The NBS Statistics Department has been monitoring these institutions since 2007, when their obligation to report data to NBS was imposed by an NBS decree⁸. For the purpose of minimizing the reporting costs to the NBS for reporting entities, we apply a so-called stratified sampling approach, under which data are collected only from entities that, within their group, form a representative sample, i.e. represent about 95% of the total assets of the given entities. Currently, in 2025, we collect quarterly balance sheet data from 14 companies whose main or significant business activity is financial leasing, from 7 companies engaged in installment financing, and from 9 companies classified as factoring and others. The data are subsequently grossed up to represent 100% of the value for the given type of entities.

7.5 Securities statistics

7.5.1 Securities issuance statistics

The compilation of securities issues statistics is governed by the relevant guideline of the European Central Bank. These statistics provide information on all debt securities and quoted shares issued by domestic entities in any currency and in any country.

The individual issues are classified according to the sector of issuer. Further classification is made according to currency (issues in euro or other currency), type of security (debt or quoted securities), and according to the original maturity (short-term up to one year or long-term over one year). Debt securities are further divided according to the type of coupon yield (fixed, variable, or zero coupon).

Debt securities statistics focus on the outstanding amounts of issues (stocks) and flows, which are broken down into gross issues and redemptions. The difference between them represents issues in net terms.

⁸ Decree of Národná banka Slovenska No. 19/2014 on reporting by factoring, leasing and consumer credit companies for statistical purposes.

a) Gross issues

Gross issues during the reporting period must include all issues of debt securities and quoted shares where the issuer sells newly created securities for cash. They concern the regular creation of new instruments. The point in time at which issues have been concluded is defined as the time at which payment is made; the recording of issues must therefore reflect as closely as possible the timing of payment of the underlying issue.

b) Redemptions

Redemptions during the reporting period cover all repurchases of debt securities and quoted shares by the issuer, where the investor receives cash for the securities. Redemptions concern the regular deletion of instruments. They cover all debt securities reaching their maturity date, as well as early redemptions. Company share buy-backs are covered, if the company repurchases all shares against cash prior to a change of its legal form, or part of its shares against cash which are cancelled, leading to a reduction in capital.

c) Net issues

Net issues represent the balance of all issues made, minus all redemptions that have occurred during the reporting period.

Outstanding amounts in the reporting period should be equal to the outstanding amounts recorded in the previous period, increased by gross issues made in the reporting period and reduced by issues redeemed in the same period. In the same way, the outstanding amounts in the reporting period can be expressed as the outstanding amounts recorded in the previous period, plus net issues in the reporting period (see the Scheme 1 below).

In fact, differences may occur as a result of price and exchange rate changes, reclassification, revision, or other adjustments.

7.5.2 Debt securities

For debtors, debt securities represent an alternative to bank loans; for creditors, they represent a possible substitute for bank deposits and marketable instruments issued by banks.

Securities issues statistics cover the following instruments:

i) **Short-term debt securities**

- Treasury bills and other short-term paper issued by the general government;
- negotiable short-term securities issued by financial and non-financial corporations; a variety of terms are used for such paper including, for example commercial papers, commercial bills, promissory notes, bills of trade, bills of exchange and certificates of deposit;
- short-term securities issued under long-term underwritten note issuance facilities;
- bankers' acceptances.

ii) **Long-term debt securities**

- bearer bonds;
- subordinated bonds;

Scheme 1

a)	outstanding issues at the end of the reporting period	≈	outstanding issues at the end of the previous reporting period	+	Gross issues during the reporting period	-	Redemptions during the reporting period
b)	outstanding issues at the end of the reporting period	≈	outstanding issues at the end of the previous reporting period	+	Net issues during the reporting period		

- bonds with optional maturity dates, the latest of which is more than one year away;
- undated or perpetual bonds;
- variable rate notes;
- convertible bonds;
- covered bonds;
- index-linked securities where the value of the principal is linked to a price index, the price of a commodity or to an exchange rate index;
- deep-discounted bonds;
- zero coupon bonds;
- euro bonds;
- global bonds;
- privately issued bonds;
- securities resulting from the conversion of loans;
- loans that have become negotiable de facto;
- special types of bonds (debentures) and borrowed securities (loan stock) convertible into shares, whether the shares of the issuing corporation or shares of another company, as long as they have not been converted. Where separable from the underlying bond, the conversion option, considered to be a financial derivative, is excluded;
- shares or stocks that pay a fixed income but do not provide for participation in the distribution of the residual value of the corporation on dissolution, including non-participating preference shares;
- financial assets issued as part of the securitisation of loans, mortgages, credit card debt, accounts receivable, and other assets.

The following instruments are excluded:

- transactions in securities as part of repurchase agreements;
- issues of non-negotiable securities;
- non-negotiable loans.

7.5.3 Quoted shares

Quoted shares are defined in this case as shares that have been admitted to trading on a quoted market, i.e. the main or parallel market, as well as shares admitted to trading on a regulated free market, but only if they have a fair market value. Their values are reported as market capitalisation for the individual sectors.

Quoted shares include:

- capital shares issued by limited liability companies;
- redeemed shares in limited liability companies;
- dividend shares issued by limited liability companies;
- preferred or preference stocks or shares which provide for participation in the distribution of the residual value on dissolution of a corporation; these may be quoted or unquoted on a recognised stock exchange;
- private placements where possible.

If a company is privatised and the government keeps part of the shares and the other part is quoted on a regulated market, the whole value of the company's capital is recorded within the outstanding amount of quoted shares, since all shares could potentially be traded at any time at market value. The same applies if part of the shares is sold to large investors and only the remaining part, i.e. free float, is traded on the stock exchange.

Quoted shares exclude:

- shares offered for sale but not taken up on issue;
- debentures and loan stock convertible into shares; these are included once they are converted into shares;

- the equity of partners with unlimited liability in incorporated partnerships;
- government investments in the capital of international organisations which are legally constituted as corporations with share capital;
- issues of bonus shares at the time of issue only and split share issues; bonus shares and split shares are, however, included indistinguishably in the total stock of quoted shares.

7.6 Long-term interest rates

Long-term interest rate stability is one of the convergence criteria laid down in the Maastricht Treaty. This criterion expresses the requirement for sustainable convergence, which is to be achieved by each Member State. The average nominal long-term interest rate in a Member State must not exceed, by more than 2%, the average nominal long-term interest rate in the three Member States with the lowest inflation rates in the year following the last assessment. The interest rates are measured on the basis of *long-term government bond rates* or the rates for comparable securities.

The statistical principles of long-term interest rate reporting are defined in the following key terms.

The term *bond issuer* refers to the *central government*. The *maturity of government bonds* is a residual maturity period of around ten years. The residual maturity period is recommended to be between 9.5 and 10.5 years. The type of bonds used should be sufficiently *liquid*. This requirement affects the choice between a *benchmark-oriented approach* and an *approach based on a basket of bonds*, depending on the national conditions. The benchmark-oriented approach treats bonds as a key indicator of the market conditions. The bond issue with the highest liquidity and turnover is often the most recent issue of sizeable volume. The approach based on a basket of bonds offers a choice of bonds from various types of bonds with various ISIN codes. The bonds available have the same weight.

In view of the situation in the local market for securities, the *benchmark-oriented approach* had been used until the end of January 2012. From the entry of Slovakia into the euro area to January 2012, daily yields to maturity were reported to the ECB for the following government bond issues:

SK4120004318 Benchmark for the period 01/2009 – 06/2010

SK4120007204 Benchmark for the period 07/2010 – 01/2012.

With effect from 1 February 2012, the benchmark-oriented approach has been replaced with an approach based on a basket of bonds. This basket included two government bond issues that fully complied with the criteria:

SK4120004318 and SK4120007543 Benchmark for the period 02/2012 – 06/2013.

With effect from 1 July 2013, the *approach based on a basket of bonds* has been replaced with a *benchmark-oriented approach*.

SK4120004318 Benchmark for the period 07/2013 – 04/2014

SK4120008871 Benchmark for the period 05/2014 – 05/2015

SK4120007543 Benchmark for the period 06/2015 – 05/2016

SK4120010430 Benchmark for the period 06/2015 – 05/2018

SK4120009762 Benchmark for the period 06/2018 – 10/2019

SK4120015173	Benchmark for the period 11/2019 – 12/2020
SK4000017059	Benchmark for the period 01/2021 – 09/2021
SK4000017166	Benchmark for the period 10/2021 – 11/2022
SK4000021986	Benchmark for the period 12/2022 – 07/2023
SK4000023230	Benchmark for the period 08/2023 – 03/2024
SK4000024865	Benchmark for the period 04/2024 – 03/2025
SK4000022539	Benchmark for the period 04/2025 – to date.

From 1.1.2015, there was a change in the methodology for calculating the yield to maturity of ten-year government bonds, when the achieved yields became the basis from direct trades registered on the Stock Exchange in Bratislava. Until December 2014, the calculation was based only on the so-called rate-creating trades.

Glossary

Aggregate balance sheet of Slovakia: a summary statistical balance sheet of all monetary and financial institutions based in Slovakia, excluding NBS.

Building loans: loans provided by home savings banks under Act No. 310/1992 Coll. on home savings as amended.

Consumer loans: defined for reporting purposes as loans provided for the purpose of personal consumption, i.e. the purchase of goods and services.

Investment loans: loans tied to the cycle of fixed assets, where the individual components of fixed assets are tied for a period longer than one year (except for loans provided for the purchase and/or technical development of land and buildings).

Intermediate loans: loans provided by home savings banks under the provisions of Act No. 310/1992 Coll. on home savings as amended.

Key ECB interest rates: the interest rates set by the Governing Council of the European Central Bank (ECB), determining the monetary policy stance of the ECB. These interest rates are the rate for the main refinancing operations, the rate for the marginal lending facility, and the rate for the deposit facility.

Monetary financial institutions (MFI): national central banks, credit institutions and other financial institutions whose business is to collect deposits and/or other redeemable instruments from entities other than MFIs, to grant credit and loans, and to make investments in securities for their own account (e.g. money market funds).

Mortgage loans: loans with a maturity of at least four years (but not more than 30 years), which are secured by a lien on domestic real estate and which satisfy the requirements laid down in Section 68 of Act No. 483/2001 Coll. on banks and on amendments to certain laws as amended.

Nominal value of loan: the outstanding amount of the loan principal, excluding accruals and other due amounts.

Non-performing loan: any loan where the bank assesses that the borrower is unlikely to meet its commitments without the security being realised, or where the borrower is more than 90 days in arrears with a significant commitment to the bank.

Operating loans: loans tied to the cycle of operating (current) assets, where the individual current asset components are usually fixed for a period of up to one year. Such loans are provided, for example, for the purchase of material supplies, raw materials, semi-finished goods, finished products, claims related to trade credits, or for the coverage of seasonal fluctuations in economic activities.

Original maturity period: the time aspect of claims and liabilities classification based on the contractual (agreed) maturity period.

Other real estate loans: real estate loans other than mortgage loans, building loans, or intermediate loans.

Pension funds: funds managed by pension fund management companies or supplementary pension asset management companies.

Real estate loans: all loans provided for the purchase and/or technical development of land and buildings, which are registered with the Land Registry under Act No. 162/1995 Coll. on land

registries and registration of ownership title and other rights to real estate (the Land Registry Act) as amended.

Residual maturity period: for claims and liabilities, the residual maturity period is the difference between the agreed maturity date and the date for which the relevant report/statement is compiled, i.e. usually the end of a month, quarter, or year.

Secured loans: for the purpose of interest rate statistics, these are loans secured up to their total amount using the technique of 'funded credit protection', or secured by a guarantee using the technique of 'unfunded credit protection' so that the value of collateral or guarantee is higher or equal to the total amount of the new loan. If the requirements for credit protection are not satisfied, the new loan is considered unsecured.

Renegotiated loans are a part of new loans and are covering all changes to former contract with the active participation of the client, resulting in the change in contract conditions with effect on the interest rate. These loans do not bring new contracts to the market.

Pure new loans are loans which are a part of new loans and are calculated as the difference between the total amount of new loans and renegotiated loans, the so called new money in economy.

Sector classification

Classification of institutional sectors and sub-sectors according to the European System of National and Regional Accounts (ESA2010):

- S.1 Residents – Slovakia (residents of the Slovak Republic)**
 - Residents – Other euro area member states** (euro area residents, except SR residents)
 - S.11 Non-financial corporations**
 - S.12 Financial corporations**
 - S.121 Central Bank (Národná banka Slovenska)
 - S.122 Other monetary financial institutions
 - S.123 Money market funds
 - S.124 Investment funds
 - S.125 Other financial intermediaries
 - S.126 Financial auxiliaries
 - S.127 Captive financial corporations and money lenders
 - S.128 Insurance corporations
 - S.129 Pension funds
 - S.13 General government**
 - S.1311 Central government
 - S.1312 Regional government
 - S.1313 Local government
 - S.1314 Social security funds
 - S.14 Households**
 - S.141 Employers
 - S.142 Own-account workers
 - S.143 Employees
 - S.144 Recipients of property incomes, pensions and other transfer incomes
 - S.145 Others
 - S.15 Non-profit institutions serving households**
- S.2 Rest of the world** (all countries, except Slovakia and the euro area)
